

in the third model. The terraces below the highest are simply remnants of later and still later flood-plains down to the lowest, which is the modern flood-plain of the river.

INDEX.

Aerial-erosion forms, 284, 285	Calcareous tufa	159
Agglomerate	Calcite	107
Alabaster	Cannel coal	143
Albite	Cañons	61, 286
Amphibole	Carlsbad twins	94
Amphibolite	Casts of fossils	206
Amygdaloid	Cavern-deposits	240
Amygdules	Caverns	55, 286
Andalusite	Chalk	107, 157
Andesite	Chambers, in veins	241
Anthracite	Chemical-erosion forms	280
Anticlines	Chemically-formed rocks	73, 140
Apatite	Chert	150, 158, 275
Arenaceous group	Chiastolite	103
Argillaceous group	Chimneys of ore	239
Arkansas stone	Chlorite	104
Arkose	Chlorite schist	169
Asphaltum	Chondrodite	103
Atmosphere, circulation of	Chrysolite	101
Augite	Clay	133
	Clay-iron-stone	148
Bad Lands	Clay-stones	273
Basalt	Cleavage-structure	249
Beaches, elevated	Closed folds	248
Biotite	Coal	74, 113, 141
Bitumens	Coal group	141
origin of	Comb-structure	238
Bituminous coal	Concretions	270
Blossom-rock	Concretionary structure	270, 277
Bog-iron ore	Cone-in-cone	278
formation of	Conglomerate	125
Bonanzas	Conglomerate group	123, 124
Breccia	Contact deposits	242
Brown coal	Contact phenomena	219
Buhrstone	Contemporaneous beds	229
Calcareous group		
141, 152
