

B. Estructura de edad de los alumnos por sexo.

Con respecto a la edad de los alumnos para el total del Estado encontramos lo siguiente: el 67% de ellos cae en el rango de 14 a 16 años, de los cuales el 86% se localiza en el Area Metropolitana; le sigue en importancia el rango de 11 a 13 con 20%, encontrándose un 92% en el Area Metropolitana; y después tenemos que el 11% lo ocupan los jóvenes con edades de 17 a 20 años, de los cuales el 86% se ubica en el Area Metropolitana.

En el primer grado la edad de los alumnos está en los dos primeros rangos, de 11 a 13 con 49% y de 14 a 16 con 45%, localizándose el 85 y 86% respectivamente en el Area Metropolitana.

Para el segundo grado adquiere mayor preponderancia el rango de 14 a 16 años, el que incluye al 84% de los alumnos. De ellos corresponden al Area Metropolitana el 86%.

Comparando los resultados del tercer grado con los obtenidos para el mismo en estudio realizado por la Dirección de Planeación Universitaria de la U.A.N.L. en el año escolar 1974-75, encontramos que en el lapso de 3 años se presentaron cambios significativos. El rango de 14 a 16 años se mantiene como el más importante, a pesar de la disminución de su porcentaje

de 86 a 76%. Esta baja es capturada por el siguiente en importancia de 17 a 20 años, ya que aumenta de 9.9 a 20.9%. En ambos rangos, el 86% de los alumnos son del Area Metropolitana.

En el Area Metropolitana encontramos proporciones semejantes a las del total del Estado, tanto para los tres grados como para el total de alumnos. En el resto del Estado se mantiene la importancia de los rangos anteriores y únicamente se presentan pequeños cambios en la magnitud de las proporciones.

Se obtienen aproximadamente los mismos resultados a todos los niveles al dividir a los alumnos de sexo masculino y femenino.
