the medieval and the modern. social science, English,
- 13.- Microscope _____ an optical instrument subjects
- 14.- Julio Iglesias _____ a exceptional singer students
- 15.- Mississippi _____ a south central state and es

of the United States. _____ last semester -
you will take other subjects that the special-
ization requires.

It is very interesting to get an university view of it -
dent. Because one teaches a new way of seeing a thing -
your job.

NOTES

- SCIENCE (biology, zoology, anatomy, physics, chemistry.)
- SOCIAL SC (history, geography, civics.)
- ACTIVITIES (music, piano, tennis, physical education, tennis, football.)

TRANSLATE

Physical science is the study of the natural world and the forces that govern it. It includes the study of matter, energy, and the interactions between them. The study of physics is a branch of physical science that deals with the properties of matter and energy and the forces that act upon them. The study of chemistry is a branch of physical science that deals with the composition, structure, and properties of matter. The study of biology is a branch of physical science that deals with the study of living organisms and their interactions with their environment. The study of geology is a branch of physical science that deals with the study of the Earth and its history. The study of astronomy is a branch of physical science that deals with the study of celestial objects and the universe. The study of meteorology is a branch of physical science that deals with the study of the atmosphere and weather. The study of oceanography is a branch of physical science that deals with the study of the oceans and their interactions with the atmosphere and land. The study of environmental science is a branch of physical science that deals with the study of the environment and the interactions between the different components of the environment. The study of earth science is a branch of physical science that deals with the study of the Earth and its history. The study of atmospheric science is a branch of physical science that deals with the study of the atmosphere and weather. The study of space science is a branch of physical science that deals with the study of the universe and the objects within it. The study of planetary science is a branch of physical science that deals with the study of planets and other celestial objects. The study of astrophysics is a branch of physical science that deals with the study of the physical properties of celestial objects and the universe. The study of cosmology is a branch of physical science that deals with the study of the universe and its origin and evolution. The study of particle physics is a branch of physical science that deals with the study of the fundamental particles and forces that make up the universe. The study of quantum mechanics is a branch of physical science that deals with the study of the behavior of matter and energy at the atomic and subatomic level. The study of relativity is a branch of physical science that deals with the study of the effects of gravity and the speed of light. The study of nuclear physics is a branch of physical science that deals with the study of the nucleus of an atom and the forces that hold it together. The study of astrophysics is a branch of physical science that deals with the study of the physical properties of celestial objects and the universe. The study of cosmology is a branch of physical science that deals with the study of the universe and its origin and evolution. The study of particle physics is a branch of physical science that deals with the study of the fundamental particles and forces that make up the universe. The study of quantum mechanics is a branch of physical science that deals with the study of the behavior of matter and energy at the atomic and subatomic level.
