

quiet the stomach quickly, but it often fails. *Inglutin*, 87, has been frequently successful; also, *Pepsin*, 90, but is less useful than the former. *Nux Vomica*, 398, a drop or two of the tincture may prove beneficial. *Arsenic*, 150, a drop of Fowler's solution, sometimes acts most favorably. *Hydrocyanic Acid*, 588, often does good and often fails. *Alcohol*, 488, as sparkling wine, may succeed temporarily. *Oxygen*, 319.

WHOOPING-COUGH:

Atropine, 439, is a good remedy when secretion is profuse, and in the spasmodic stage; decided physiological effects should be produced to have any curative action. *Hyoscine*, 451. *Bromides*, 542, give relief to the spasmodic condition—to the whoop—but do not much moderate the violence of the disease; *Bromide of Camphor*, 456, seems to be more useful. *Hydrobromic ether*, 490, subcutaneously by stomach, or by inhalation. *Chloral*, 512, is very useful at any stage, but is most serviceable during the spasmodic. *Castanea*, 301, a decoction of the leaves, may be taken at pleasure, and with certainty of some, although not marked, benefit. *Nitric Acid*, 100, sometimes benefits exceedingly, but is uncertain. *Alum*, 294, especially when there is a copious bronchial secretion. *Lobelia*, 585, when it acts as a nauseant, is most beneficial. *Carbolic Acid*, 327, by inhalation, seems to be a very valuable remedy. *Benzoate of Sodium*, 356, internally and by spray, is reported to be very serviceable. To

these may be added *Salicylates*, *Resorcin*, and other antiseptics. *Lactucarium*, 588, the sirup, is a useful vehicle for the exhibition of other medicines. *Asafetida*, 460, a disagreeable but useful remedy, and may be given freely to infants and young children. *Hydrocyanic Acid*, 588, may be given during the spasm stage, but it is most efficacious as a remedy for the cough kept up by habit after the subsidence of the disease, and the cough by imitation.

WORMS. (See PARASITES.)

Eucalyptus, 163. *Calomel*, 252, an excellent remedy to expel the round worm, and is best administered with santonin. *Salicylic Acid*, 340, has been used successfully against tænia. *Anthelmintics*, 654.

WOUNDS:

Lister's Method, 330. *Water*, 72, cold and hot, as a dressing for wounds, to arrest hæmorrhage, and, in form of baths, to depress abnormal heat. *Alcohol*, 479, 484, an excellent antiseptic and astringent dressing, and as a remedy in pyrexia. *Carbolic*, 330, *Boracic*, 352, and *Salicylic Acids*, 345, used under the antiseptic system, to disinfect, deodorize, and to change the character of wounds. *Chlorine*, 321.

WRITER'S CRAMP:

Metallotherapy, 292. *Faradism*, 385.

YELLOW FEVER:

Carbolic Acid, 329. *Champagne, iced*, 488. *Turpentine*, 663, for the vomiting.

THE END.

THE POPULAR SCIENCE MONTHLY.

CONDUCTED BY E. L. AND W. J. YOUMANS.

THE POPULAR SCIENCE MONTHLY was established a dozen years ago to bring before the general public the results of scientific thought on many large and important questions which could find no expression in the current periodicals. Scientific inquiry was penetrating many new fields, extending important knowledge, and profoundly affecting opinion upon numberless questions of speculative and practical interest. It was the policy of this magazine at the outset, and has been constantly adhered to since, to obtain the ablest statements from the most distinguished scientific men of all countries in their bearing upon the higher problems of investigation. Leaving the dry and technical details of science, which are of chief concern to specialists, to the journals devoted to them, THE POPULAR SCIENCE MONTHLY has dealt with those more general and practical subjects which are of the greatest interest and importance to the people at large.

That which was at first a dubious experiment has now become an assured and permanent success. Our MONTHLY is the acknowledged organ of progressive scientific ideas in this country. Received with favor at the outset, it has gone on increasing in circulation and in influence, until its power is felt and acknowledged in the highest departments of intellectual activity, and its leadership is recognized in the great work of liberalizing and educating the popular mind.

Making neither sensational appeals nor flaring announcements, we may now refer to its course in the past as a sufficient guarantee that it will continue to discuss in the same earnest and fearless, but always respectful manner, the various important questions falling within its scope that are entitled to the intelligent consideration of thinking people. The twenty-three volumes now published constitute the best library of advanced scientific knowledge to be found in any country, and each new volume is certain to prove of increasing interest and value.

Science is the great agency of improvement in this age, private and public, individual, social, professional, and industrial. In its irresistible progress it touches everywhere, and affects everybody. It gives law to the material interests of the community, and modifies its ideas, opinions, and beliefs, so that all have an interest in being informed of its advancement. Those, therefore, who desire to know what is going on in the world of thought in these stirring times, when new knowledge is rapidly extending, and old errors are giving way, will find that they can keep informed only by subscribing for THE POPULAR SCIENCE MONTHLY.

Terms: \$5.00 per Annum.

Volume XXIV begins with the November number. Subscriptions may begin at any time.

THE
NEW YORK MEDICAL JOURNAL,

A WEEKLY REVIEW OF MEDICINE.

THE FEATURES OF THIS JOURNAL ARE:

LECTURES.—The frequent publication of material of this sort is a prominent feature, and pains are taken to choose such as will prove valuable to the reader.

ORIGINAL COMMUNICATIONS.—In accepting articles of that class, regard is had more particularly to the wants of the general practitioner, and all the special branches of medicine are duly represented.

BOOK NOTICES.—Current publications are noticed in a spirit of fairness, and with the sole view of giving information to the reader.

CLINICAL REPORTS are also a regular feature of the Journal, embracing clinical records from the various hospitals and clinics, not only of New York, but of various other cities, together with clinical contributions from private practice.

EDITORIAL ARTICLES are numerous and carefully written, and we are able to give timely consideration to passing events.

MINOR PARAGRAPHS.—Under this heading are given short comments and notes on passing events.

NEWS ITEMS contain the latest news of interest to the profession.

OBITUARY NOTES announce the deaths which occur in the ranks of the profession, with a brief history of each individual when practicable.

SOCIETY PROCEEDINGS are given promptly, and those of a great number of societies figure. At the same time we select for publication only such as we think profitable to our readers.

REPORTS ON THE PROGRESS OF MEDICINE constitute a feature of the Journal which we have reason to think is highly valued by our readers.

MISCELLANY includes matter of general interest, and space is also given for

NEW INVENTIONS and LETTERS TO THE EDITOR.

The Journal has gained rapidly in public favor, and every effort is made to maintain the high standard of excellence which has always characterized it. As an advertising medium it stands second to no journal, as is evinced by the quality and increasing quantity of its advertisements.

Price, \$5.00 per annum; single copy, 12 cents.

D. APPLETON & CO., Publishers, 1, 3, & 5 Bond Street, New York.

SCIENTIFIC PUBLICATIONS.

SUICIDE:

AN ESSAY IN COMPARATIVE MORAL STATISTICS. By HENRY MORSELLI, Professor of Psychological Medicine in the Royal University, Turin. 12mo, cloth. Price, \$1.75.

"Suicide" is a scientific inquiry, on the basis of the statistical method, into the laws of suicidal phenomena. Dealing with the subject as a branch of social science, it considers the increase of suicides in different countries, and the comparison of nations, races, and periods in its manifestation. The influences of age, sex, constitution, climate, season, occupation, religion, prevailing ideas, the elements of character, and the tendencies of civilization, are comprehensively analyzed in their bearing upon the propensity to self-destruction. Professor Morselli is an eminent European authority on this subject. It is accompanied by colored maps illustrating pictorially the results of statistical inquiries.

VOLCANOES:

WHAT THEY ARE AND WHAT THEY TEACH. By J. W. JUDD, Professor of Geology in the Royal School of Mines (London). With Ninety-six Illustrations. 12mo, cloth. \$2.00.

"In no field has modern research been more fruitful than in that of which Professor Judd gives a popular account in the present volume. The great lines of dynamical, geological, and meteorological inquiry converge upon the grand problem of the interior constitution of the earth, and the vast influence of subterranean agencies. . . . His book is very far from being a mere dry description of volcanoes and their eruptions; it is rather a presentation of the terrestrial facts and laws with which volcanic phenomena are associated."—*Popular Science Monthly*.

"The volume before us is one of the pleasantest science manuals we have read for some time."—*Athenæum*.

"Mr. Judd's summary is so full and so concise, that it is almost impossible to give a fair idea in a short review."—*Pall Mall Gazette*.

THE SUN.

By C. A. YOUNG, Ph. D., LL. D., Professor of Astronomy in the College of New Jersey. With numerous Illustrations. 12mo, cloth. \$2.00.

"Professor Young is an authority on 'The Sun,' and writes from intimate knowledge. He has studied that great luminary all his life, invented and improved instruments for observing it, gone to all quarters of the world in search of the best places and opportunities to watch it, and has contributed important discoveries that have extended our knowledge of it.

"It would take a cyclopædia to represent all that has been done toward clearing up the solar mysteries. Professor Young has summarized the information, and presented it in a form completely available for general readers. There is no rhetoric in his book; he trusts the grandeur of his theme to kindle interest and impress the feelings. His statements are plain, direct, clear, and condensed, though ample enough for his purpose, and the substance of what is generally wanted will be found accurately given in his pages."—*Popular Science Monthly*.

ILLUSIONS:

A PSYCHOLOGICAL STUDY. By JAMES SULLY, author of "Sensation and Intuition," etc. 12mo, cloth. \$1.50.

"An interesting contribution by Mr. James Sully to the study of mental pathology. The author's field of inquiry covers all the phenomena of illusion observed in sense-perception, in the introspection of the mind's own feelings, in the reading of others' feelings, in memory, and in belief. The author's conclusions are often illustrated by concrete example or anecdote, and his general treatment of the subject, while essentially scientific, is sufficiently clear and animated to attract the general reader."—*New York Sun*.

New York: D. APPLETON & CO., 1, 3, & 5 Bond Street.

SCIENTIFIC PUBLICATIONS.

The Brain and its Functions.

By J. LUYS, Physician to the Hospice de la Salpêtrière. With Illustrations.
12mo. Cloth, \$1.50.

"No living physiologist is better entitled to speak with authority upon the structure and functions of the brain than Dr. Luys. His studies on the anatomy of the nervous system are acknowledged to be the fullest and most systematic ever undertaken. Dr. Luys supports his conclusions not only by his own anatomical researches, but also by many functional observations of various other physiologists, including of course Professor Ferrier's now classical experiments."—*St. James's Gazette*.

"Dr. Luys, at the head of the great French Insane Asylum, is one of the most eminent and successful investigators of cerebral science now living; and he has given unquestionably the clearest and most interesting brief account yet made of the structure and operations of the brain. We have been fascinated by this volume more than by any other treatise we have yet seen on the machinery of sensibility and thought; and we have been instructed not only by much that is new, but by many sagacious practical hints such as it is well for everybody to understand."—*The Popular Science Monthly*.

The Concepts and Theories of Modern Physics.

By J. B. STALLO. 12mo. Cloth, \$1.75.

"Judge Stallo's work is an inquiry into the validity of those mechanical conceptions of the universe which are now held as fundamental in physical science. He takes up the leading modern doctrines which are based upon this mechanical conception, such as the atomic constitution of matter, the kinetic theory of gases, the conservation of energy, the nebular hypothesis, and other views, to find how much stands upon solid empirical ground, and how much rests upon metaphysical speculation. Since the appearance of Dr. Draper's 'Religion and Science,' no book has been published in the country calculated to make so deep an impression on thoughtful and educated readers as this volume. . . . The range and minuteness of the author's learning, the acuteness of his reasoning, and the singular precision and clearness of his style, are qualities which very seldom have been jointly exhibited in a scientific treatise."—*New York Sun*.

The Formation of Vegetable Mould,

THROUGH THE ACTION OF WORMS, WITH OBSERVATIONS ON THEIR HABITS. By CHARLES DARWIN, LL. D., F. R. S., author of "On the Origin of Species," etc., etc. With Illustrations. 12mo, cloth. Price, \$1.50.

"Mr. Darwin's little volume on the habits and instincts of earth-worms is no less marked than the earlier or more elaborate efforts of his genius by freshness of observation, unflinching power of interpreting and correlating facts, and logical vigor in generalizing upon them. The main purpose of the work is to point out the share which worms have taken in the formation of the layer of vegetable mould which covers the whole surface of the land in every moderately humid country. All lovers of nature will unite in thanking Mr. Darwin for the new and interesting light he has thrown upon a subject so long overlooked, yet so full of interest and instruction, as the structure and the labors of the earth-worm."—*Saturday Review*.

"Respecting worms as among the most useful portions of animate nature, Dr. Darwin relates, in this remarkable book, their structure and habits, the part they have played in the burial of ancient buildings and the denudation of the land, in the disintegration of rocks, the preparation of soil for the growth of plants, and in the natural history of the world."—*Boston Advertiser*.

CATALOGUE
OF
MEDICAL WORKS.

THE PUERPERAL DISEASES. Clinical Lectures delivered at Bellevue Hospital. By FORDYCE BARKER, M. D., Clinical Professor of Midwifery and the Diseases of Women in the Bellevue Hospital Medical College; late Obstetric Physician to Bellevue Hospital; Surgeon to the New York State Woman's Hospital, etc.

Fourth edition. 1 vol., 8vo, 526 pp. Cloth, \$5.00; sheep, \$6.00.

"For nearly twenty years it has been my duty, as well as my privilege, to give clinical lectures at Bellevue Hospital, on midwifery, the puerperal, and the other diseases of women. This volume is made up substantially from phonographic reports of the lectures which I have given on the puerperal diseases. Having had rather exceptional opportunities for the study of these diseases, I have felt it to be an imperative duty to utilize, so far as lay in my power, the advantages which I have enjoyed for the promotion of science, and, I hope, for the interests of humanity."—*From Author's Preface.*

ON SEA-SICKNESS. By FORDYCE BARKER, M. D.

1 vol., 16mo, 36 pp. Flexible cloth, 75 cents.

Reprinted from the "New York Medical Journal." By reason of the great demand for the number of that Journal containing the paper, it is now presented in book form, with such prescriptions added as the author has found useful in relieving the suffering from sea-sickness.

PARALYSIS FROM BRAIN DISEASE IN ITS COMMON FORMS. By H. CHARLTON BASTIAN, M. A., M. D., Fellow of the Royal College of Physicians; Professor of Pathological Anatomy in University College, London.

With Illustrations. 1 vol., 12mo, 340 pp. Cloth, \$1.75.

"These lectures were delivered in University College Hospital last year, at a time when I was doing duty for one of the senior physicians, and during the same year—after they had been reproduced from very full notes taken by my friend Mr. John Tweedy—they appeared in the pages of 'The Lancet.' They are now republished at the request of many friends, though only after having undergone a very careful revision, during which a considerable quantity of new matter has been added. It would have been easy to have very much increased the size of the book by the introduction of a larger number of illustrative cases, and by treatment of many of the subjects at greater length, but this the author has purposely abstained from doing under the belief that in its present form it is likely to prove more acceptable to students, and also perhaps more useful to busy practitioners."—*Extract from Preface.*

THE MANAGEMENT OF INFANCY, Physiological and Moral. Intended chiefly for the Use of Parents. By ANDREW COMBE, M. D. Revised and edited by Sir James Clark, K. C. B., M. D., F. R. S., Physician-in-ordinary to the Queen.

First American from the tenth London edition. 1 vol., 12mo, 302 pp. Cloth, \$1.50.

"This excellent little book should be in the hand of every mother of a family."—*The Lancet.*
