The curriculum of study is graded. Three annual courses are required, and an optional course of four years is arranged. Preliminary acquirements are required for admission, and special arrangements are made for students who have taken the preparatory medical courses now offered by a number of the college and university literary departments.

The teaching is by means of didactic and clinical lectures, recitations, drill in small clinical classes, practical demonstrations, laboratory work, dissection, and quizzes by members of the faculty.

The clinical material is ample both in hospitals and the dispensary departments, and it is used for the benefit of the students.

Practical work in the Microscopical Laboratory is compulsory, and no extra fee is charged.

For a catalogue containing detailed information address the Secretary.
