

FOODS FOR THE FAT. A Treatise on Corpulency, and a Dietary for its Cure. By NATHANIEL EDWARD DAVIES, Member of the Royal College of Surgeons, England, author of "Aids to Long Life," "Medical Maxims," "Nursery Hints," etc.

12mo. Cloth, 75 cents.

PRESS COMMENTS.

"It will prove a valuable guide to those who wish to reduce their surplus weight. The volume closes with a large number of recipes for tempting dishes that will assist far better than medicine in bringing the body back to healthful slenderness."—*Pittsburg Bulletin*.

"It treats suggestively of the uses and the elimination of food, over-eating, exercise, stim-

ulants, etc., and gives a dietary to be followed for the reduction of flesh. The latter is especially generous, and will make it possible for any 'fat man' to starve himself and yet live. The author's thesis is that such a man 'can go on eating very well indeed, and yet be cured of excessive stoutness.'"—*Washington Public Opinion*.

INTRACRANIAL TUMOURS. By BYRON BRAMWELL, M.D., F.R.S.E., Lecturer on the Principles and Practice of Medicine in the Extra-Academical School of Medicine, Edinburgh.

116 illustrations. 270 pages. 8vo. Cloth, \$4.50.

PRESS COMMENTS.

"The book is of great value from its wealth of personal observations, and is an excellent manual upon a subject which has recently become so much more important than ever before. The arrangement is good, the style clear, and the illustrations, which are most profuse, are most admirable. They alone are worth the price of the book, for almost every one of them is new, and they are drawn from specimens in the possession of the author or his friends."—*Boston Medical and Surgical Journal*.

"There have been few books issued from the medical press of this or any other country which can compare with this magnificent volume. It is printed in the most admirable way, and its illustrations are unusually fine. The

latter include such beautiful engravings and reproductions of photographs, showing the macroscopic and microscopic appearances of a great variety of morbid conditions of the brain and its aduixa, that it is hard to find words to express the admiration they excite. And these attractions of the book are entirely in keeping with the scientific merits of its contents. Dr. Bramwell is well known as a careful observer and an able writer, and his reputation—already sufficiently established—will only be enhanced by this work. No careful student of brain-pathology can afford to be without it, and we can recommend it in the most unqualified terms to the attention of our readers."—*Philadelphia Medical and Surgical Reporter*.

HYDROPHOBIA. An account of M. PASTEUR'S system.

Containing a translation of all his communications on the subject, the technique of his method, and the latest statistical results. By RENAUD SUZOR, M.B., C.M., Edinburgh, and M.D., Paris, commissioned by the Government of the Colony of Mauritius to study M. PASTEUR'S new treatment in Paris.

With 7 illustrations. 12mo. Fine cloth, \$1.50.

PRESS COMMENTS.

"For the better comprehension of what this benefactor of mankind (M. Pasteur) aims at doing, and how far he has advanced towards the attainment of his object, we cordially welcome this small work by Dr. Suzor, which essentially consists of a translation of all M. Pasteur's communications to the Academy of Sciences and elsewhere on the subject of hydrophobia, with a description of his technique, and the latest statistical results. . . . There will be

no need to repeat this labor, so well done is it in the work before us.

"Preliminary to the chief part of the work is a short description of hydrophobia, so far as known previous to the end of the year 1880, when M. Pasteur turned his attention to the disease. The description is excellent, and well worthy of perusal by those even who are not above a free expression of opinion on this most difficult subject."—*London Saturday Review*.

ELEMENTS OF MODERN CHEMISTRY. By ADOLPHE WURTZ, Senator, Professor of Chemistry of the Faculty of Medicine of Paris, etc. *Third American Edition.* Translated and edited with the approbation of the author, from the *Fifth French Edition*, by DR. WM. H. GREENE, Professor of Chemistry in the Philadelphia Central High School, etc.

New edition, revised and enlarged. 132 illustrations. 8vo. Cloth, \$2.50; library sheep, \$3.00.

The progress of the science has made necessary many changes in the fifth edition of this little book, which has so far retained about the form and scope given to it some years ago. It has been deemed advisable to complete the organic portion, and a large number of additions and corrections have been made. Whole chapters

[SPECIMEN ILLUSTRATION.]

have been added to the history of the cyanogen compounds, the hydrocarbons, the acids, and the aromatic compounds. Among these will be particularly noticed the articles on isomerism, the azoic and diazoic compounds, and the pyrodic bases, subjects which have acquired great importance during the last few years.

PRESS COMMENTS.

"There are a great many text-books on chemistry in the field already, but we know of none that will fill the wants of the student so completely as this. It presents the facts of organic as well as inorganic chemistry."—*N. Y. Medical Record*.

"That this work has already passed through five French and three American editions, sufficiently attests its worth. The method adopted by the author in presenting the subject is, on the whole, we believe, a happy one. Before entering upon a description of the elements and their compounds, those underlying principles and laws of chemical combination which are of most importance for the beginner to understand at the outset, such as the laws of definite and multiple proportions, Gay-Lussac's law, Ampiris law, the law of specific heats, of isomorphism, etc., are stated and illustrated by well-chosen experi-

ments, and the more difficult subjects of the theory of atomicity and Mendelejeff's periodic law are reserved for elucidation later on,

[SPECIMEN ILLUSTRATION.]

after the student is better prepared by study and experiment to understand them. Nearly half the book is devoted to organic chemistry, not too large a proportion, considering the great importance of the subject and the rapid advances it is making at the present time."—*Western Druggist*.

J. B. Lippincott Company's Medical and Surgical Works.

ATLAS OF VENEREAL DISEASES. By P. H. MAC-LAREN, M.D., F.R.C.S.E.

Containing 30 colored plates and over 40 subjects. Complete in ten parts. Royal 4to. Paper, \$2.00 per part; or one volume, folio, half morocco, \$25.00.

This work consists of a series of life-size plates. The illustrations, without exception, are original. They are copied from paintings of cases which have come under the author's observation during the past few years. The chief aim of this work is to offer to the medical profession a series of illustrations which may prove useful. To medical students who have not sufficient time nor opportunity afforded them in their curriculum for the systematic study of the multiform expressions of this class of diseases, it is hoped that this Atlas will be specially serviceable. In the production of the plates neither labor nor expense has been spared to reproduce the original paintings with accuracy and finish. Each will be accompanied by a concise and clear description of the conditions portrayed. The Atlas is handsomely printed on a thick specially-prepared paper, folio size, 15 x 11.

GYNÆCOLOGICAL ELECTRO-THERAPEUTICS. By DR. HORATIO R. BIGELOW, Permanent Member of the American Medical Association, Fellow of the British Gynæcological Society, etc., with an Introduction by Dr. GEORGES APOSTOLI.

Illustrated. 8vo. Cloth. \$3.00.

"This comprises a recapitulation of the work and methods of Dr. Apostoli. The book is opened by an introduction on the advantages of the use of electricity in the treatment of the diseases of women, and the class of cases which are most likely to derive benefit from its use.

"The first three chapters are devoted to the physics of electricity,—knowledge necessary to a proper understanding of the therapeutic application of the agent.

"The balance of the book is taken up with a *résumé* of Apostoli's plans of treat-

ment. . . . To those who are unable to read his papers in the original, this book affords an opportunity to acquaint themselves with the great success attained by this diligent student. Those interested in the treatment of pelvic disorders will find themselves well repaid for a perusal of this work. The results given are so flattering that the operator who cures such diseases by mutilation should hesitate before sacrificing organs that may be rendered productive and painless by other methods of treatment."—*Philadelphia Medical Bulletin*.

HYDATID DISEASE IN ITS CLINICAL ASPECTS.

By JAMES GRAHAM, M.A., M.D., late Demonstrator of Anatomy, Sydney University.

204 pages. With 34 full-page colored plates from original drawings. 8vo. Cloth, \$4.50.

NERVES OF THE HUMAN BODY. With Diagrams.

By ALFRED R. HUGHES, Bachelor of Medicine and Master in Surgery of the University of Edinburgh, etc.

4to. Cloth, 32 pages, \$3.00.

While chiefly designed to lighten the task of students of medicine in acquiring a knowledge of the nerves of the human body, this volume may also be used to advantage as an adjunct to the standard works on practical anatomy. The letter-press covers all that is required, and the diagrams are carefully executed. The book will be found a great help to students in their practical work.

J. B. Lippincott Company's Medical and Surgical Works.

THE COMPLETE MEDICAL POCKET-FORMULARY AND PHYSICIAN'S VADE-MECUM. Collated for the Use of Practitioners. By J. C. WILSON, A.M., M.D., Physician to the German Hospital, Philadelphia, etc.

262 pages. Bound in leather, pocket-book form (size, 3¼ x 8 inches), \$2.00.

The value of such a manual for ready reference at all times has been fully established, and is understood not only by the busy practitioner, but also by every physician at the outset of his professional labors. This new work contains upwards of twenty-five hundred prescriptions, collected from the practice of physicians and surgeons of experience, American and foreign, arranged for ready reference under an alphabetical list of diseases. Also a special list of new drugs, with their dosage, solubilities, and therapeutical applications; together with a table of formulæ for suppositories; a table of formulæ for hypodermic medication; a list of drugs for inhalation; a table of poisons, with their antidotes; a posological table; a list of incompatibles; a table of metric equivalents; a brief account of external antipyretics, disinfectants, medical thermometry, the urinary tests; and much other useful information.

THE DISEASES OF THE MOUTH IN CHILDREN. (Non-Surgical.) By F. FORCHHEIMER, M.D., Professor of Physiology and Clinical Diseases of Children, Medical College of Ohio, etc.

12mo. Cloth, \$1.25.

The aim of the author has been to make this small volume a systematic treatise on the non-surgical diseases of the mouth in children,—a subject of vital importance, and one to which teachers and writers on pediatrics have not given the attention that the prevalence of such diseases would seem to require. In fact, no separate work on the subject has hitherto been published in the English language. Dr. Forchheimer has devoted special study to this numerous and troublesome class of ailments, and embodies in his volume the clinical material collected during a period of many years and the results of his own ripe experience and careful observation in an extensive practice.

INTERNATIONAL MEDICAL MAGAZINE. A Monthly, devoted to Medical and Surgical Science. Edited by JUDSON DALAND, M.D.

Subscription, \$4.00 per year.

Each number contains over one hundred pages, made up of original contributions, clinical lectures, translations from the French, German, Spanish, and Italian medical authorities, book-reviews, and medico-legal medicine, and is divided into the following departments: Medicine, Surgery, Obstetrics, and Gynæcology, Pædiatrics, Therapeutics, Ophthalmology, Rhinology, Laryngology, Pathology, Dermatology, and Jurisprudence of Medicine.

The contributors of original matter are specialists whose investigations and discoveries have had and continue to exercise a directive influence on the course of the science of medicine, and whose achievements and triumphs as teachers, authors, and practitioners, have placed them at the very head and front of their profession, and given them an international fame. Accordingly, the corps of contributors, whose aid has either been secured or promised, comprises representatives from the leading medical schools of the United States, together with the best known men of the great medical centres abroad, such as London, Paris, Berlin, and Vienna.

Each number is profusely illustrated with photographs or original drawings, wherever their presence will serve to explain the text and help the busy reader to a ready and accurate apprehension of the subject-matter.
