CATALOGUE  
OF  
MEDICAL WORKS.

ANSTIE.

Neuralgia, and Diseases which resemble it.

By FRANCIS E. ANSTIE, M. D., F. R. C. P.,

Senior Assistant Physician to Westminster Hospital; Lecturer on Materia Medica in Westminster Hospital School; and Physician to the Belgrave Hospital for Children; Editor of "The Practitioner" (London), etc.

1 vol., 12mo. Cloth, \$2.50.

"It is a valuable contribution to scientific medicine."—*The Lancet* (London).

BARKER.

The Puerperal Diseases. *Clinical Lectures*  
delivered at Bellevue Hospital.

By FORDYCE BARKER, M. D.,

Clinical Professor of Midwifery and the Diseases of Women in the Bellevue Hospital Medical College; Obstetric Physician to Bellevue Hospital; Consulting Physician to the New York State Woman's Hospital; Fellow of the New York Academy of Medicine; formerly President of the Medical Society of the State of New York; Honorary Fellow of the Obstetrical Societies of London and Edinburgh; Honorary Fellow of the Royal Medical Society of Athens, Greece, etc., etc., etc.

1 vol., 8vo. Cloth. 526 pages. Price, \$5.00.

"For nearly twenty years it has been my duty, as well as my privilege, to give clinical lectures at Bellevue Hospital, on midwifery, the puerperal and the other diseases of women. This volume is made up substantially from phonographic reports of the lectures which I have given on the puerperal diseases. Having had rather exceptional opportunities for the study of these diseases, I have felt it to be an imperative duty to utilize, so far as lay in my power, the advantages which I have enjoyed for the promotion of science, and, I hope, for the interests of humanity. In many subjects, such as albuminuria, convulsions, thrombosis, and embolism, septicæmia, and pyæmia, the advance of science has been so rapid as to make it necessary to teach something new every year. Those, therefore, who have formerly listened to my lectures on these subjects, and who now do me the honor to read this volume, will not be surprised to find, in many particulars, changes in pathological views, and often in therapeutical teaching, from doctrines before inculcated. At the present day, for the first time in the history of the world, the obstetric department seems to be assuming its proper position, as the highest branch of medicine, if its rank be graded by its importance to society, or by the intellectual culture and ability required, as compared with that demanded of the physician or the surgeon. A man may become eminent as a physician, and yet know very little of obstetrics; or he may be a successful and distinguished surgeon, and be quite ignorant of even the rudiments of obstetrics. But no one can be a really able obstetrician unless he be both physician and surgeon. And, as the greater includes the less, obstetrics should rank as the highest department of our profession."—*From Author's Preface.*

On Sea-sickness.

By FORDYCE BARKER, M. D.

1 vol., 16mo. 36 pp. Flexible Cloth, 75 cents.

Reprinted from the NEW YORK MEDICAL JOURNAL. By reason of the great demand for the number of that journal containing the paper, it is now presented in book form, with such prescriptions added as the author has found useful in relieving the suffering from sea-sickness.

## BARNES.

## Obstetric Operations, including the Treatment of Hemorrhage.

By ROBERT BARNES, M. D., F. R. C. P., LONDON,

Obstetric Physician to and Lecturer on Midwifery and the Diseases of Women and Children at St. Thomas's Hospital; Examiner on Midwifery to the Royal College of Physicians and to the Royal College of Surgeons; formerly Obstetric Physician to the London Hospital, and late Physician to the Eastern Division of the Royal Maternity Charity.

WITH ADDITIONS, by BENJAMIN F. DAWSON, M. D.,

Late Lecturer on Uterine Pathology in the Medical Department of the University of New York; Assistant to the Clinical Professor of Diseases of Children in the College of Physicians and Surgeons, New York; Physician for the Diseases of Children to the New York Dispensary; Member of the New York Obstetrical Society, of the Medical Society of the County of New York, etc., etc.

Second American Edition. 1 vol., 8vo. 503 pp. Cloth, \$4.50.

"Such a work as Dr. Barnes's was greatly needed. It is calculated to elevate the practice of the obstetric art in this country, and to be of great service to the practitioner."—*Lancet*.

## Bellevue and Charity Hospital Reports.

The volume of Bellevue and Charity Hospital Reports for 1870, containing valuable contributions from

ISAAC E. TAYLOR, M. D., AUSTIN FLINT, M. D., LEWIS A. SAYRE, M. D., WILLIAM A. HAMMOND, M. D., T. GAILLARD THOMAS, M. D., FRANK H. HAMILTON, M. D., and others.

1 vol., 8vo. Cloth, \$4.00.

"These institutions are the most important, as regards accommodations for patients and variety of cases treated, of any on this continent, and are surpassed by but few in the world. The gentlemen connected with them are acknowledged to be among the first in their profession, and the volume is an important addition to the professional literature of this country."—*Psychological Journal*.

## BENNET.

## Winter and Spring on the Shores of the Mediterranean; or, the Riviera, Mentone, Italy, Corsica, Sicily, Algeria, Spain, and Biarritz, as Winter Climates.

By J. HENRY BENNET, M. D.,

Member of the Royal College of Physicians, London; late Physician-Accoucheur to the Royal Free Hospital; Doctor of Medicine of the University of Paris; formerly Resident Physician to the Paris Hospital (ex-Interne des Hôpitaux de Paris), etc.

This work embodies the experience of ten winters and springs passed by Dr. Bennet on the shores of the Mediterranean, and contains much valuable information for physicians in relation to the health-restoring climate of the regions described.

1 vol. 12mo. 621 pp. Cloth, \$3.50.

"Exceedingly readable, apart from its special purposes, and well illustrated."—*Evening Commercial*.

"It has a more substantial value for the physician, perhaps, than for any other class or profession. . . . We commend this book to our readers as a volume presenting two capital qualifications—it is at once entertaining and instructive."—*N. Y. Medical Journal*.

## BENNET.

## On the Treatment of Pulmonary Consumption, by Hygiene, Climate, and Medicine, in its Connection with Modern Doctrines.

By JAMES HENRY BENNET, M. D.,

Member of the Royal College of Physicians, London; Doctor of Medicine of the University of Paris, etc., etc.

1 vol., thin 8vo. Cloth, \$1.50.

An interesting and instructive work, written in the strong, clear, and lucid manner which appears in all the contributions of Dr. Bennet to medical or general literature.

"We cordially commend this book to the attention of all, for its practical common-sense views of the nature and treatment of the scourge of all temperate climates, pulmonary consumption."—*Detroit Review of Medicine*.

## BILLROTH.

## General Surgical Pathology and Therapeutics, in Fifty Lectures. A Text-book for Students and Physicians.

By DR. THEODOR BILLROTH.

Translated from the Fifth German Edition, with the special permission of the Author, by

CHARLES E. HACKLEY, A. M., M. D.,

Surgeon to the New York Eye and Ear Infirmary; Physician to the New York Hospital; Fellow of the New York Academy of Medicine, etc.

1 vol., 8vo. 714 pp., and 152 Woodcuts. Cloth, \$5.00; Sheep, \$6.00.

Professor Theodor Billroth, one of the most noted authorities on Surgical Pathology, gives in this volume a complete résumé of the existing state of knowledge in this branch of medical science. The fact of this publication going through four editions in Germany, and having been translated into French, Italian, Russian, and Hungarian, should be some guarantee for its standing.

"The want of a book in the English language, presenting in a concise form the views of the German pathologists, has long been felt; and we venture to say no book could more perfectly supply that want than the present volume. . . . We would strongly recommend it to all who take any interest in the progress of thought and observation in surgical pathology, and surgery."—*The Lancet*.

"We can assure our readers that they will consider neither money wasted in its purchase, nor time in its perusal."—*The Medical Investigator*.

## CARPENTER.

## Principles of Mental Physiology, with their Applications to the Training and Discipline of the Mind and the Study of its Morbid Conditions.

By WM. B. CARPENTER, M. D., LL. D., F. R. S., F. L. S., F. G. S.,

Registrar of the University of London; Corresponding Member of the Institute of France and of the American Philosophical Society, etc., etc.

"Among the numerous eminent writers this country has produced, none are more deserving of praise for having attempted to apply the results of Physiological Research to the explanation of the mutual relations of the mind and body than Dr. Carpenter. To him belongs the merit of having scientifically studied and of having in many instances supplied a rational explanation of those phenomena which, under the names of mesmerism, spirit-rapping, electro-biology, and hypnotism, have attracted so large an amount of attention during the last twenty years. . . . We must conclude by recommending Dr. Carpenter's work to the members of our own profession as applying many facts, that have hitherto stood isolated, to the explanation of the functions of the brain and to psychological processes generally."—*The Lancet*.

## COMBE.

The Management of Infancy, *Physiological and Moral. Intended chiefly for the Use of Parents.*

By ANDREW COMBE, M. D.

REVISED AND EDITED

By SIR JAMES CLARK, K. C. B., M. D., F. R. S.,  
Physician-in-ordinary to the Queen.

First American from the Tenth London Edition. 1 vol., 12mo. 302 pp.  
Cloth, \$1.50.

"This excellent little book should be in the hand of every mother of a family; and, if some of our lady friends would master its contents, and either bring up their children by the light of its teachings, or communicate the truths it contains to the poor by whom they are surrounded, we are convinced that they would effect infinitely more good than by the distribution of any number of tracts whatever. . . . We consider this work to be one of the few popular medical treatises that any practitioner may recommend to his patients; and, though, if its precepts are followed, he will probably lose a few guineas, he will not begrudge them if he sees his friend's children grow up healthy, active, strong, and both mentally and physically capable."—*The Lancet*.

## CHAUVEAU.

The Comparative Anatomy of the  
*Domesticated Animals.*

By A. CHAUVEAU,

PROFESSOR AT THE LYONS VETERINARY SCHOOL.

Second edition, revised and enlarged, with the coöperation of S. ARLOING, late Principal of Anatomy at the Lyons Veterinary School; Professor at the Toulouse Veterinary School. Translated and edited by GEORGE FLEMING, F. R. G. S., M. A. I., Veterinary Surgeon, Royal Engineers.

1 vol., 8vo. Cloth. 957 pp., with 450 illustrations. Price, \$6.00.

## OPINIONS OF THE PRESS.

"This is a valuable work, well conceived and well executed by the authors, MM. Chauveau and Arloing, and well translated by Mr. Fleming. It is rather surprising how few works exist, in any language, in which the anatomy of the commoner animals, domestic and otherwise, is given with any approach to detail. Systematic works there are in abundance, but if the student be desirous of ascertaining any particular point, such as the position and branches of the pneumogastric or sympathetic nerves, or the homologue of a given muscle in several different animals, he may search all day ere he find it. The work before us appears to be well adapted to meet this difficulty.

"The illustrations are very numerous, and Mr. Fleming has introduced a large number that are not contained in the original work.

"Taking it altogether, the book is a very welcome addition to English literature, and great credit is due to Mr. Fleming for the excellence of the translation, and the many additional notes he has appended to Chauveau's treatise."—*Lancet (London)*.

"The want of a text-book on the Comparative Anatomy of the Domesticated Animals has long been felt. . . . The descriptions of the text are illustrated and assisted by no less than 450 excellent woodcuts. In a work which ranges over so vast a field of anatomical detail and description, it is difficult to select any one portion for review, but our examination of it enables us to speak in high terms of its general excellence. . . . The care and attention with which hippotony has been cultivated on the Continent are illustrated by every page in M. Chauveau's work."—*Medical Times and Gazette (London)*.

## DAVIS.

Conservative Surgery, *as exhibited in remedying some of the Mechanical Causes that operate injuriously both in Health and Disease. With Illustrations.*

By HENRY G. DAVIS, M. D.,

Member of the American Medical Association, etc., etc.

1 vol., 8vo. 315 pp. Cloth, \$3.00.

The author has enjoyed rare facilities for the study and treatment of certain classes of disease, and the records here presented to the profession are the gradual accumulation of over thirty years' investigation.

"Dr. Davis, bringing, as he does to his specialty, a great aptitude for the solution of mechanical problems, takes a high rank as an orthopedic surgeon, and his very practical contribution to the literature of the subject is both valuable and opportune. We deem it worthy of a place in every physician's library. The style is unpretending, but trenchant, graphic, and, best of all, quite intelligible."—*Medical Record*.

## ECKER.

The Cerebral Convolutions of Man,  
*represented according to Personal Investigations, especially on their Development in the Fœtus, and with reference to the Use of Physicians.*

By ALEXANDER ECKER,

Professor of Anatomy and Comparative Anatomy in the University of Freiburg.

Translated from the German by Robert T. Edes, M. D.

1 vol., 8vo. 87 pp. \$1.25.

"The work of Prof. Ecker is noticeable principally for its succinctness and clearness, avoiding long discussions on undecided points, and yet sufficiently furnished with references to make easy its comparison with the labors of others in the same direction.

"Entire originality in descriptive anatomy is out of the question, but the facts verified by our author are here presented in a more intelligible manner than in any other easily-accessible work.

"The knowledge to be derived from this work is not furnished by any other text-book in the English language."—*Boston Medical and Surgical Journal*, January 20, 1873.

## ELLIOT.

**Obstetric Clinic.** *A Practical Contribution to the Study of Obstetrics, and the Diseases of Women and Children.*

By the late GEORGE T. ELLIOT, M. D.,

Late Professor of Obstetrics and the Diseases of Women and Children in the Bellevue Hospital Medical College; Physician to Bellevue Hospital, and to the New York Lying-in Asylum; Consulting Physician to the Nursery and Child's Hospital; Consulting Surgeon to the State Woman's Hospital; Corresponding Member of the Edinburgh Obstetrical Society and of the Royal Academy of Havana; Fellow of the N. Y. Academy of Medicine; Member of the County Medical Society, of the Pathological Society, etc., etc.

1 vol., 8vo. 458 pp. Cloth, \$4.50.

This work is, in a measure, a *résumé* of separate papers previously prepared by the late Dr. Elliot; and contains, besides, a record of nearly two hundred important and difficult cases in midwifery, selected from his own practice. It has met with a hearty reception, and has received the highest encomiums both in this country and in Europe.

"The volume by Dr. Elliot has scarcely less value, though in a different direction, than that of the Edinburgh physician (Dr. Duncan, 'Researches in Obstetrics')."—*Lancet*.

"There is no book in American obstetrical literature that surpasses this one."—*Edinburgh Medical Journal*.

"It ought to be in the hands of every practitioner of midwifery in the country."—*Boston Medical and Surgical Journal*.

"It has no equal in the English language, as regards clinical instruction in obstetrics."—*American Journal of Obstetrics*.

## FLINT.

**Manual of Chemical Examination of the Urine in Disease.** *With Brief Directions for the Examination of the most Common Varieties of Urinary Calculi.*

By AUSTIN FLINT, JR., M. D.,

Professor of Physiology and Microscopy in the Bellevue Hospital Medical College; Fellow of the New York Academy of Medicine; Member of the Medical Society of the County of New York; Resident Member of the Lyceum of Natural History in the City of New York, etc.

Third Edition, revised and corrected. 1 vol., 12mo. 77 pp. Cloth, \$1.00.

The chief aim of this little work is to enable the busy practitioner to make for himself, rapidly and easily, all ordinary examinations of Urine; to give him the benefit of the author's experience in eliminating little difficulties in the manipulations, and in reducing processes of analysis to the utmost simplicity that is consistent with accuracy.

"We do not know of any work in English so complete and handy as the Manual now offered to the profession by Dr. Flint, and the high scientific reputation of the author is a sufficient guarantee of the accuracy of all the directions given."—*Journal of Applied Chemistry*.

"We can unhesitatingly recommend this Manual."—*Psychological Journal*.

"Eminently practical."—*Detroit Review of Medicine*.

## FLINT.

**The Physiology of Man.** *Designed to represent the Existing State of Physiological Science as applied to the Functions of the Human Body.*

By AUSTIN FLINT, JR., M. D.,

Professor of Physiology and Microscopy in the Bellevue Hospital Medical College, and in the Long Island College Hospital; Fellow of the New York Academy of Medicine; Microscopist to Bellevue Hospital.

In Five Volumes. 8vo. Tinted Paper.

Volume I.—*The Blood; Circulation; Respiration.*

8vo. 502 pp. Cloth, \$4.50.

"If the remaining portions of this work are compiled with the same care and accuracy, the whole may vie with any of those that have of late years been produced in our own or in foreign languages."—*British and Foreign Medico-Chirurgical Review*.

"As a book of general information it will be found useful to the practitioner, and, as a book of reference, invaluable in the hands of the anatomist and physiologist."—*Dublin Quarterly Journal of Medical Science*.

"The complete work will prove a valuable addition to our systematic treatises on human physiology."—*The Lancet*.

"To those who desire to get in one volume a concise and clear, and at the same time sufficiently full *résumé* of 'the existing state of physiological science,' we can heartily recommend Dr. Flint's work. Moreover, as a work of typographical art it deserves a prominent place upon our library-shelves. Messrs. Appleton & Co. deserve the thanks of the profession for the very handsome style in which they issue medical works. They give us hope of a time when it will be very generally believed by publishers that physicians' eyes are worth saving."—*Medical Gazette*.

Volume II.—*Alimentation; Digestion; Absorption; Lymph and Chyle.*

8vo. 556 pp. Cloth, \$4.50.

"The second instalment of this work fulfils all the expectations raised by the perusal of the first. . . . The author's explanations and deductions bear evidence of much careful reflection and study. . . . The entire work is one of rare interest. The author's style is as clear and concise as his method is studious, careful, and elaborate."—*Philadelphia Inquirer*.

"We regard the two treatises already issued as the very best on human physiology which the English or any other language affords, and we recommend them with thorough confidence to students, practitioners, and laymen, as models of literary and scientific ability."—*N. Y. Medical Journal*.

"We have found the style easy, lucid, and at the same time terse. The practical and positive results of physiological investigation are succinctly stated, without, it would seem, extended discussion of disputed points."—*Boston Medical and Surgical Journal*.

"It is a volume which will be welcome to the advanced student, and as a work of reference."—*The Lancet*.

"The leading subjects treated of are presented in distinct parts, each of which is designed to be an exhaustive essay on that to which it refers."—*Western Journal of Medicine*.

**Flint's Physiology.** Volume III.—*Secretion; Excretion; Ductless Glands; Nutrition; Animal Heat; Movements; Voice and Speech.*

8vo. 526 pp. Cloth, \$4.50.

"Dr. Flint's reputation is sufficient to give a character to the book among the profession, where it will chiefly circulate, and many of the facts given have been verified by the author in his laboratory and in public demonstration."—*Chicago Courier.*

"The author bestows judicious care and labor. Facts are selected with discrimination, theories critically examined, and conclusions enunciated with commendable clearness and precision."—*American Journal of the Medical Sciences.*

Volume IV.—*The Nervous System.*

8vo. Cloth, \$4.50.

This volume embodies the results of exhaustive study, and of a long and laborious series of experiments, presented in a manner remarkable for its strength and clearness. No other department of physiology has so profound an interest for the modern and progressive physician as that pertaining to the nervous system. The diseases of this system are now engaging the study and attention of some of the greatest minds in the medical world, and in order to follow their brilliant discoveries and developments, especially in connection with the science of electrology, it is absolutely necessary to obtain a clear and settled knowledge of the anatomy and physiology of the nervous system. It is the design of this work to impart that knowledge free from the perplexing speculations and uncertainties that have no real value for the practical student of medicine. The author boldly tests every theory for himself, and asks his readers to accept nothing that is not capable of demonstration. The properties of the cerebro-spinal, nervous, and sympathetic systems are treated of in a manner at once lucid, thorough, and interesting.

Although this volume is one, perhaps the most important one, of the author's admirable series in the *Physiology of Man*, it is nevertheless complete in itself, and may be safely pronounced indispensable to every physician who takes a pride and interest in the progress of medical science.

Volume V.—*Special Senses; Generation.*

8vo. Cloth, \$4.50.

"The present volume completes the task, begun eleven years ago, of preparing a work, intended to represent the existing state of physiological science, as applied to the functions of the human body. The kindly reception which the first four volumes have received has done much to sustain the author in an undertaking, the magnitude of which he has appreciated more and more as the work has progressed.

"In the fifth and last volume, an attempt has been made to give a clear account of the physiology of the special senses and generation, a most difficult and delicate undertaking. . . .

"Finally, as regards the last, as well as the former volumes, the author can only say that he has spared neither time nor labor in their preparation; and the imperfections in their execution have been due to deficiency in ability and opportunity. He indulges the hope, however, that he has written a book which may assist his fellow-workers, and interest, not only the student and practitioner of medicine, but some others who desire to keep pace with the progress of Natural Science."—*Extracts from Preface.*

**FLINT.**

**On the Physiological Effects of Severe and Protracted Muscular Exercise. With Special reference to its Influence upon the Excretion of Nitrogen.**

By AUSTIN FLINT, JR., M. D.,

Professor of Physiology in the Bellevue Hospital Medical College, New York, etc., etc.

1 vol., 8vo. 91 pp. Cloth, \$2.00.

This monograph on the relations of Urea to Exercise is the result of a thorough and careful investigation made in the case of Mr. Edward Payson Weston, the celebrated pedestrian. The chemical analyses were made under the direction of R. O. Doremus, M. D., Professor of Chemistry and Toxicology in the Bellevue Hospital Medical College, by Mr. Oscar Loew, his assistant. The observations were made with the coöperation of J. C. Dalton, M. D., Professor of Physiology in the College of Physicians and Surgeons; Alexander B. Mott, M. D., Professor of Surgical Anatomy; W. H. Van Buren, M. D., Professor of Principles of Surgery; Austin Flint, M. D., Professor of the Principles and Practice of Medicine; W. A. Hammond, M. D., Professor of Diseases of the Mind and Nervous System—all of the Bellevue Hospital Medical College.

"This work will be found interesting to every physician. A number of important results were obtained valuable to the physiologist."—*Cincinnati Medical Repertory.*

**HAMILTON.**

**Clinical Electro-Therapeutics.** (*Medical and Surgical.*) *A Manual for Physicians for the Treatment more especially of Nervous Diseases.*

By ALLAN McLANE HAMILTON, M. D.,

Physician in charge of the New York State Hospital for Diseases of the Nervous System; Member of the New York Neurological and County Medical Societies, etc., etc.

With Numerous Illustrations. 1 vol., 8vo. Cloth. Price, \$2.00.

This work is the compilation of well-trying measures and reported cases, and is intended as a simple guide for the general practitioner. It is as free from confusing theories, technical terms, and unproved statements, as possible. Electricity is indorsed as a very valuable remedy in certain diseases, and as an invaluable therapeutical means in nearly all forms of NERVOUS DISEASE; but not as a specific for every human ill, mental and physical.

**HAMMOND.**

**Insanity in its Relations to Crime.**  
*A Text and a Commentary.*

By WILLIAM A. HAMMOND, M. D.

1 vol. 8vo. 77 pp. Cloth, \$1.00.

"A part of this essay, under the title 'Society versus Insanity,' was contributed to *Putnam's Magazine*, for September, 1870. The greater portion is now first published. The importance of the subject considered can scarcely be over-estimated, whether we regard it from the stand-point of science or social economy; and, if I have aided in its elucidation, my object will have been attained."—*From Author's Preface.*
