THE END.

A TREATISE ON THE DISEASES OF THE NERVOUS SYSTEM.

By WILLIAM A. HAMMOND, M. D.,
Surgeon-General U. S. Army (retired list).

WITH THE COLLABORATION OF GRAEME M. HAMMOND, M. D.,
Professor of Diseases of the Mind and Nervous System in the New York
Post-Graduate Medical School and Hospital, etc.

With 118 Illustrations.

NINTH EDITION, WITH CORRECTIONS AND ADDITIONS.

8vo. 932 pages. Cloth, \$5.00; sheep, \$6.00.

"Dr. Hammond's treatise on the diseases of the nervous system is a work which has been long familiar to the profession, and has attained a great reputation among the standard books for reference. In the preparation of the present edition the author has been aided by his son. A vast amount of clinical material is made use of, and the results of experimental investigation recorded. The book is written in a clear and pleasing style, and obscure conditions are dealt with in a manner which will prove of great assistance in the study of this most interesting class of diseases."
—*Canadian Practitioner.*

"Dr. Hammond published the first edition of his 'Treatise on Diseases of the Nervous System' in 1871. It has therefore been before the profession for twenty years, and during these years it has continued to grow in public favor, this being the ninth edition that has been issued. Appreciation of this work has not only been shown in this country, but abroad, as it has been translated into the French, the Italian, and the Spanish languages. The present edition has been thoroughly revised, and several new chapters added. This is a book of such great value, and is referred to so frequently by the medical press and other medical works, that no library is complete without it."
—*Alabama Medical and Surgical Age.*

"There are few books, even upon those subjects which are constantly in the ordinary physician's mind, which succeed as has that of Dr. Hammond; and when we recollect that when the first edition of this work appeared, neurology in America was in its very infancy, the rapid exhaustion of its editions is the more remarkable. In the ninth edition the writer's son has done much toward keeping the work abreast of the times, and, with more confidence than ever, it can now be regarded as one of the best and most satisfactory works on nervous diseases, either for the practitioner or for the advanced student. The book is beautified and its usefulness increased by a larger number of illustrations than heretofore—among the best from a medical point of view being those representing syringo-myelia, which have been taken from the studies of Van Giesen."

THE DISEASES OF THE STOMACH.

By Dr. C. A. EWALD,

EXTRAORDINARY PROFESSOR OF MEDICINE AT THE UNIVERSITY OF BERLIN.

Translated and Edited, with numerous Additions, from the Third German Edition,

By MORRIS MANGES, A. M., M. D.,

ASSISTANT VISITING PHYSICIAN TO MOUNT SINAI HOSPITAL; LECTURER ON GENERAL MEDICINE, NEW YORK POLYCLINIC, ETC.

This work has been thoroughly revised, rearranged, largely rewritten, and brought up to date from the most recent literature on the subject.

8vo, 602 pages. Sold by subscription. Cloth, \$5.00; sheep, \$6.00.

"In giving the medical profession this second revised translation of Prof. Ewald's treatise on the Diseases of the Stomach, Dr. Manges has placed the profession under even greater obligations than we owed for the first. The first translation was then an almost exhaustive treatise, and now, with so much new and valuable data added, the work is a *sine qua non*."—*Atlanta Medical and Surgical Journal*.

"This work as it now stands is the best on the subject of stomach diseases in the English language. No physician's library is complete without it. It is in every way well adapted to the requirements of the general practitioner, although complete enough to meet also the requirements of the specialist."—*American Medico-Surgical Bulletin*.

"The present American edition is a peculiarly valuable one, as the editor, Dr. Manges, has done his work in a thoroughly creditable manner. His numerous notes, additions, and new illustrations have made the book a classic one. Under these circumstances it should find a place in the library of every American physician, as their *clientèle* is composed of such a large proportion of patients suffering from gastric complaints and more or less improper medication which most often ends in failure. There is no doubt that more properly directed efforts in the proper direction, as outlined in Ewald's book, would soon remove from Americans the reputation of being a nation of dyspeptics."—*St. Louis Medical and Surgical Journal*.

"Dr. Ewald's book has met with a very cordial reception by the medical profession. Within a short period three editions have appeared, and translations published in England, Spain, France, Italy, and the United States. To the present edition the author has not only added considerable new matter, but he has also entirely rewritten the work. The arrangement of the chapters has been somewhat changed, and many new personal observations and therapeutic experiences added. The desirability of surgical interference is carefully considered, and the *pros* and *cons* given so far as would be necessary to enable a physician to determine whether the aid of the surgeon might be required. The translator has done his work well, and has incorporated much new matter into the text and footnotes."—*North American Journal of Homœopathy*.

American Medico-Surgical Bulletin:

"This work is in every sense of the word a new book; for, while the best work of other authors in this and other countries has been drawn upon, especially that in the form of monographs and in the files of pædiatric literature, the majority is derived from the author's own clinical observations. Obsolete dicta handed down from text-book to text-book are here conspicuously absent, and nothing has been accepted which has not been carefully tested. . . . It is not venturing too much, after a careful perusal of these pages, to predict for this volume a pre-eminent and lasting position among the treatises upon this subject. We heartily recommend that it find a place not only in the library of every physician but wide open at the elbow of every man who desires to deal intelligently with the problems which confront him in the treatment of infants and children intrusted to his care."

Nashville Journal of Medicine:

"This magnificent work is one of the most valuable recent contributions to medical literature. It will rapidly win its way to a front rank with other standard works upon kindred subjects. It is as nearly complete as a treatise upon this subject can be."

Virginia Medical Semi-Monthly:

"When one recalls the teachings of a decade or two ago and compares the inculcations of to-day, he can scarcely help recognizing that 'old things have passed away, and all things have become new.' The volume before us is practically the record of information obtained by the author from eleven years of special study and practice, so that nearly every subject is presented from the standpoint of personal observation and experience. The information given is therefore reliable, for Dr. Holt is a close observer and a careful student of his ripe experience. . . . In short, this book appears to us to be the best all-round, up-to-date book for practitioners and students of children's diseases that we know of."

Medical Progress:

"The work before us is one which reflects great credit upon the distinguished author. Dr. Holt has long been known as a most industrious and painstaking investigator, and in this volume he sustains that reputation. The work, we may say in a sentence, is fully up to the requirements of the times, and there is no advance known to pædiatrics which has not been fully dealt with according to its merits."

of the Chest, Brompton, etc.

With an American Appendix by SAMUEL TREAT ARMSTRONG, Ph. D., M. D.,
Visiting Physician to the Harlem, Willard Parker, and Riverside Hospitals, New York.

IN TWO VOLUMES.

Sold only by subscription.

This work is primarily a Dictionary of Medicine, in which the several diseases are fully discussed in alphabetical order. The description of each includes an account of its etiology and anatomical characters; its symptoms, course, duration, and termination; its diagnosis, prognosis, and, lastly, its treatment. General Pathology comprehends articles on the origin, characters, and nature of disease.

General Therapeutics includes articles on the several classes of remedies, their modes of action, and on the methods of their use. The articles devoted to the subject of Hygiene treat of the causes and prevention of disease, of the agencies and laws affecting public health, of the means of preserving the health of the individual, of the construction and management of hospitals, and of the nursing of the sick.

Lastly, the diseases peculiar to women and children are discussed under their respective headings, both in aggregate and in detail.

The American Appendix gives more definite information regarding American Mineral Springs, and adds one or two articles on particularly American topics, besides introducing some recent medical terms and a few cross-references.

The *British Medical Journal* says of the new edition:

"The original purpose which actuated the preparation of the original edition was, to quote the words of the preface which the editor has written for the new edition, 'a desire to place in the hands of the practitioner, the teacher, and the student a means of ready reference to the accumulated knowledge which we possessed of scientific and practical medicine, rapid as was its progress, and difficult of access as were its scattered records.' The scheme of the work was so comprehensive, the selection of writers so judicious, that this end was attained more completely than the most sanguine expectations of the able editor and his assistants could have anticipated. . . . In preparing a new edition the fact had to be faced that never in the history of medicine had progress been so rapid as in the last twelve years. New facts have been ascertained, and new ways of looking at old facts have come to be recognized as true. . . . The revision which the work has undergone has been of the most thorough and judicious character. . . . The list of new writers numbers fifty, and among them are to be found the names of those who are leading authorities upon the subjects which have been committed to their care."
