REFERENCE HANDBOOK OF THE MEDICAL SCIENCES

Foreign bodies used by women and children in their efforts to relieve bodily pain because of the following causes: priapism, pain around the anus, in the rectum, in the vagina, or in the bladder. The treatment of these diseases is by the use of antiseptic agents and for the relief of pain, the use of warm emollient ointments and lotions. Lithotomy, in order to graft a natural papilla on the bladder, is occasionally necessary in the antiseptic treatment of these diseases. The introduction of a small catheter into the bladder is often the only method of relief and it is done without the least pain or inconvenience. The intravenous administration of antiseptic agents is of great importance in the treatment of these diseases.
