FIRST EDITION OF
A MANUAL OF THE DISEASES OF THE EYE.

By C. MACNAMARA,

Surgeon to the Mayo and Calcutta Ophthalmic Hospital.

OPINIONS OF THE PRESS.

"A complete, well-arranged, clear, and condensed manual, which is at present without a rival."—*British Medical Journal*.

"Mr. Macnamara's manual is a welcome addition to the list of English educational works, and affords a gratifying proof that it is possible to lay before the student, in a small and readable volume, a complete account of the principles and practice of modern Ophthalmic Surgery."—*Medical Times and Gazette*.

"The therapeutics of the work is its main feature, and the sections devoted to this subject embrace a consideration of almost everything that has of late years been suggested upon points of Ophthalmic treatment."—*The Practitioner*.

"Professor Macnamara's work contains a vast quantity of information compressed into a small space, and is, we consider, the best manual on diseases of the eye now existing; although specially adapted for students, it will be found reliable and serviceable by the busy practitioner. Its marginal notes on the contents of the paragraphs will greatly facilitate reference."—*Dublin Quarterly Journal of Medical Sciences*.

"Mr. Macnamara has spared no pains in making the book thoroughly representative of modern ophthalmology; and though he has given reference to nearly everything of practical importance which has been done within the past few years, he has been most successful in avoiding that diffuseness, and that want of well arranged sequence, which to so many writers are veritable stumbling-blocks."—*Indian Medical Gazette*.

"It is well and clearly written, embraces all subjects of much importance to the practitioner, and sustains the reputation which its author gained by the publication of his 'Lectures.'"—*British and Foreign Medico-Chirurgical Review*.

A TREATISE ON ASIATIC CHOLERA.

By C. MACNAMARA.

8vo, 16s.

OPINIONS OF THE PRESS.

"Dr. Macnamara entirely adopts the view that cholera is communicated by 'an organic infecting matter passed with the evacuations of those affected.' He argues this point, as well as many others connected with the disease, with great acumen.—I cannot spare space to extract any more from this admirable work, but recommend strongly its perusal by all."—*Dr. E. A. Parkes. Army Medical Department Report for 1863, London; 1870.*

"There are several characteristic features of Asiatic Cholera especially considered at length by Dr. Macnamara, and which require to be enumerated here—the student being again referred to this excellent work for more extended information."—*The Science and Practice of Medicine*. Dr. Aitken. Sixth edition, vol. i. p. 676.

"But the only way we can do justice to his argument, is to advise those interested in the matter to read this book."—*Edinburgh Medical Journal*, June, 1870.

"Those of our readers, however, who, on our recommendation, may study his book for themselves, will find, as we have done, that it is full of thought and research, eminently suggestive, and most valuable as a compendium of all hitherto thought or known about cholera, as well as containing much that is new."—*Medical Times and Gazette*, July 9th, 1870.

"The work contains an extensive collection of facts resting on copious evidence which has never yet been laid completely before the public.—He has added not a little by his diligent observation of facts, to the solidity of the basis on which rests the modern theory that cholera-dejecta are the only true source of cholera-infection."—*The Practitioner*, February, 1870.

"His opportunities of studying the natural history of cholera in a practical point of view have been very considerable, and we are bound to say that the most has been made of them, especially in regard to his researches on the special pathology of the disease."—*Madras Monthly Journal of Medicine and Science*, July, 1870.

"The causation, pathology, and treatment of the disease are very ably discussed."—*Lancet*, February, 1870.

"By those in any part of the world that are engaged in the prevention and treatment of cholera, the work ought to be thoroughly studied and mastered."—*Athenaeum*, March, 1870.

"It is singular that we have hitherto hardly had one really good scientific and exhaustive treatise on this disease. The gap, however, is at last filled, for in the very comprehensive and large book now on our table, we have a satisfactory monograph on cholera."—*Scientific Opinion*, December, 1869.

"The section on the geographical distribution of cholera, and that on the bearing of meteorological influences upon the spread of the disease, is also very valuable."—*Chemical News*, December, 1869.

"Next to the unique value of Dr. Macnamara's treatise as a popular compendium of the whole subject written in a scientific spirit, we rank the results of his microscopic experiments and *post-mortem* examinations as tending to show us what cholera really is."—*Friend of India*, January, 1870.

"Dr. Macnamara deserves the thanks of the Indian Medical Service for having shown the world that the members of it are now, and have always been, hard working men, keenly alive to every influence bearing upon the health of the community, military and civil. Only by agreeing with Dr. Macnamara's theory of diffusion by means of water can we thoroughly understand the distinction between *contagion* and *communicability*."—*Indian Medical Gazette*, March, 1870.

"We have read Dr. Macnamara's treatise with great care, and with much interest; it is the most complete and most practical work on Asiatic cholera which we possess; its author adds to an extensive acquaintance with the literature of the subject a thorough familiarity with the disease acquired by personal observation, aided by all the appliances for research which modern science has given us, and no physician who is likely to meet this terrible disease of which it treats should be without it."—*Dublin Quarterly Journal of Medical Sciences*, February, 1871.
