

ever, some remaining for examination, which are partly of a practical, partly of a scientific interest. Under the name *chyluria*, mention is made of the *Filaria sanguinis hominis*, a parasite discovered by Dr. T. R. Lewis. An endemic hæmaturia occurs at the Cape of Good Hope and other parts of the African Continent, which is caused by a fluke, called after its discoverer, Dr. Bilharz, of Cairo, the *Bilharzia hæmatobia*. This parasite is found in the veins of the portal system and in the bladder, and causes hæmaturia.

Certain trematode parasites, commonly known as *flukes*, are sometimes found in the human body, notably in the liver. About twenty cases of *distoma hepaticum* have been recorded, several by Professor Joseph Leidy, M. D., of Philadelphia, and they may therefore be encountered in this country. Besides their usual abode in the liver-ducts and gall-bladder, they have been found under the skin behind the ear, under the scalp, and in the sole of the foot.

Of greater practical importance to the physicians of this country, especially of the Southern States, is the *chigoe*, or popularly the *jigger* or *sand-flea*. The popular notion is so far true that this parasite really belongs to the flea tribe, and is named *Pulex penetrans*. It inhabits by preference a dry, sandy soil, and is exceedingly prolific. It deserves to have the adjective *penetrans* appended to *pulex*. They bore into the skin of the feet, especially under the nails and between the toes, where the softer integument permits more ready penetration. The impregnated female, thus deposited under the skin, swells to considerable size, and excites a violent local inflammation, suppuration, and sloughing. The larvæ also, deposited in open wounds and ulcers, excite unhealthy and destructive inflammation. The bones finally become diseased, and toes may slough off, or an extremity may be lost by a necessary amputation.

It follows, from these considerations, that when a jigger penetrates the skin it should be removed with the utmost care, so that no portion of it, or any of its larvæ, be permitted to remain behind. If the parasite is not successfully removed, its destruction by carbolic acid, or sulphurous-acid lotions, should be attempted.

GENERAL INDEX.

THE NEW YORK MEDICAL JOURNAL,

A Weekly Review of Medicine,

Edited by FRANK P. FOSTER, M. D.,

Has for its principal features LECTURES, ORIGINAL COMMUNICATIONS, CLINICAL REPORTS, CORRESPONDENCE, BOOK NOTICES, LEADING ARTICLES, MINOR PARAGRAPHS, NEWS ITEMS, LETTERS TO THE EDITOR, PROCEEDINGS OF SOCIETIES, REPORTS ON THE PROGRESS OF MEDICINE, and MISCELLANY.

So rapidly has the JOURNAL gained in public favor that it is now acknowledged to be the Leading Journal of America. It numbers among its contributors many of the most eminent men in the profession, whose papers are valuable additions to medical literature. The Society Reports, of which each number of the JOURNAL contains several, are full of interesting and instructive matter. The Reports on the Progress of Medicine, written by men specially qualified in their respective branches, cover the most recent advances in medical science. Current events of the day are treated under the head of News Items, from a medical standpoint. Everything new and useful in materia medica is chronicled under the head of Miscellany in "Therapeutical Notes," which appear frequently, and are alone well worth the subscription price of the JOURNAL.

The arrangement of the matter in the JOURNAL enables us to furnish a greater amount of reading-matter in its twenty-eight double-columned pages than is given by any other journal of its class in America. Illustrations are more freely given than in most journals, and are, as a rule, much better executed.

To the physician who desires to keep abreast of the times in medicine and surgery, THE NEW YORK MEDICAL JOURNAL is an indispensable requisite, and to the ADVERTISER who wishes to reach the medical profession it is a medium second to none, as its rapidly increasing circulation, distributed throughout the entire Union, will abundantly prove.

Subscription price, \$5.00 per annum.

JOURNAL OF CUTANEOUS AND GENITO-URINARY DISEASES,

EDITED BY

PRINCE A. MORROW, A. M., M. D., and JOHN A. FORDYCE, A. M., M. D.

PUBLISHED MONTHLY BY D. APPLETON & CO.

The history of this JOURNAL, which is now in its seventh year of publication, has been one of progression, and, under the present editorial management, there can be no doubt that it will preserve and increase the reputation already established.

This JOURNAL is not, as its name might indicate, solely for specialists, but it appeals quite as strongly to the general practitioner, to whom it is an invaluable aid, in that it enables him to become conversant with the advances in, and the literature of, dermatology and syphilography. Devoted to the diseases indicated in its title, the JOURNAL will be contributed to by the most eminent dermatologists and syphilographers in this country. Whenever the subject requires illustration, woodcuts or chromo-lithographs will be employed.

Letters from Europe, one or more of which will appear in each issue of the JOURNAL, will keep the reader informed of the advances in this department of medicine at the great medical centers, Vienna, Berlin, and Paris.

A feature of the JOURNAL will be the publication of abstracts of translations of notable papers and selections from foreign journals.

Due prominence will be given to Society Transactions, including papers read and the discussions had thereon, so far as they have a bearing upon the subjects to which the pages of the JOURNAL are devoted.

Both the editors and the publishers will put forth every effort to make the JOURNAL instructive, attractive, and a representative one of its class; and they feel assured that every practitioner, whose work brings him in contact with cutaneous or genito-urinary diseases, will find it of great value and assistance to him.

Subscription price, \$2.50 per annum.

New York: D. APPLETON & CO., 1, 3, & 5 Bond Street.

ESTABLISHED BY EDWARD L. YOUMANS.

THE POPULAR SCIENCE MONTHLY,

EDITED BY WILLIAM JAY YOUMANS,

Well known as a trustworthy medium for the spread of scientific truth in popular form, is filled with articles of interest to everybody, by the ablest writers of the time. Its range of topics, which is widening with the advance of science, includes—

PREVENTION OF DISEASE AND IMPROVEMENT OF THE RACE.
AGRICULTURAL AND FOOD PRODUCTS.
