

tantiæ panis, facta in sensibus nostris eadem modificatione sive impressione, quam panis ante consecrationem producebat. Unum hic diligenter monere oportet, Concilia Lateranense, Florentinum et Tridentinum *accidentium* nomen non usurpasse, sed *specierum*. Quæ cum ita sint, catholica fide certum ac definitum non est accidentia absoluta ad fidem pertinere; sed hoc certissime tenendum est; totam panis et vini substantiam converti seu transmutari in corpus et sanguinem Christi; species verò seu accidentia remanere fidei auctoritate et sensuum iudicio indubitatum est. Verùm quid sint et in quo consistant species illæ, Ecclesia non pronuntiavit. Quamobrem dum Synodus Constantiensis damnavit hanc Wicleffi propositionem: *in Eucharistia non manent accidentia sine subjecto*; censent Theologi censuram non cadere in accidentia, sed in accidentium subjectum, scilicet in substantiam panis et vini quam supresse dicebat Wicleffus. Quòd autem nutritionem spectat, responderi solet, vel Deum aliam substituere materiam, qua corpora nutriantur, vel per se corpora nostra sustentare; qui enim corpora ex nihilo produxit, potest haud dubie illa sustentare ac nutrire. Itaque ex his omnibus concludere licet, sacrosanctum Eucharistiæ mysterium incomprehensibile quidem esse et ineffabile, non tamen à divina omnipotentia et ratione alienum; quare hanc appendicem absolvemus Concilii Tridentini verbis sess. 13. cap. 1. ubi sermo est de ratione, qua Christus est in Eucharistia: *quam etsi verbis exprimere vix possumus, possibilem tamen esse Deo, cogitatione per fidem illustrata, assequi possumus, et constantissime credere debemus*: quæ quidem verba non de hoc Sacramento tantum, sed de aliis omnibus fidei nostræ mysteriis sancte tenenda sunt.

## INDEX PROOEMIUM.

	Pag.
CAPUT I. De natura, et divisione Physicæ.	1
CAPUT II. De regulis philosophandi.	5
REGULA I. Effectum naturalium causæ non plures sunt admittendæ, quam quæ et veræ sunt, et effectibus explicandis sufficiunt.	ibid.
REGULA II. Effectum naturalium ejusdem generis eadem sunt causæ.	6
REGULA III. Qualitates, quæ in omnibus corporibus, in quibus experimenta sumere licet, sine ullo earumdem qualitatum incremento, vel decremento observantur, pro universalibus corporum qualitatum haberi debent.	8
REGULA IV. In Philosophia experimentalis propositiones ex phænomenis per inductionem collectæ non obstantibus contrariis hypothésibus pro veris aut accurate, aut quam proximè haberi debent; donec alia occurrant phænomena, per quæ aut accuratiores reddantur, aut exceptionibus obnoxia.	10
PARS PRIMA PHYSICÆ.	
SECTIO I. De universalibus corporum viribus.	12
CAPUT I. De vi inertie, plurimisque inde colligendis Physicæ principijs.	13
ARTIC. I. De vera notionem, et existentiam vis inertie.	ibid.
CONCLUSIO. Demonstratur vis inertie.	16
ARTIC. II. De principio actionis, et reactionis.	24
CONCLUSIO. Reactionem actioni contrariam, et æqualem esse demonstratur.	25
ARTIC. III. De virium compositione.	31
APPENDIX. De quibusdam capituli præcedentis utilitatibus.	38
CAPUT II. De vi attractionis, varisque illius speciebus.	43
ARTIC. I. De attractione generatim considerata.	ibid.
CONCLUSIO. Universalem inter corpora omnia attractionem demonstrant phænomena.	47
ARTIC. II. De prima attractionis lege.	55
CONCLUSIO. Attractionis universalis lex est, ut corpora omnia sese utraque in ratione directâ massarum, et duplicata inversa distantiarum.	59

ARTIC. III. De altera attractionis specie.	66
CONCLUSIO. Præter attractionis legem in ratione distantiarum duplicata decrescentem, admittenda est lex alia in ratione plusquam duplicata decrescens.	70
APPENDIX. De quibusdam capitibus præcedentis utilitatibus.	78
CAPUT III. De gravitate constanti.	86
ARTIC. I. De gravitatis terrestris affectionibus præcipuis.	87
ARTIC. II. De causa gravitatis.	94
CONCLUSIO. A vortice Cartesiano repeti non potest gravitatis causa, nec ab ullo impellente fluido cognitis proprietates habeat.	97
ARTIC. III. De centro gravitatis.	107
APPENDIX. De quibusdam capitibus præcedentis utilitatibus.	120
SECTIO II. De reliquis universalibus corporum proprietatibus ex virium notione derivandis.	129
CAPUT I. De motu in genere variisque illius speciebus. ibi I.	130
ARTIC. I. De motu generatim considerato.	130
ARTIC. II. De rectilineo corporum descensu.	134
ARTIC. III. De motu curvilineo.	141
CONCLUSIO. Gravitatis terrestris inæqualitatem demonstrant accuratissime instituta pendulorum experimenta.	150
ARTIC. III. De corporum conflictu.	167
APPENDIX. De quibusdam capitibus præcedentis utilitatibus.	186
CAPUT II. De extensione et reliquis inde pendentes corporum proprietatibus.	197
ARTIC. I. De extensione penetrabili.	198
CONCLUSIO. I. Validissimis rationibus probatur vacuum.	200
CONCLUSIO. II. Corpora omnia innumeris poris pertusa esse demonstratur.	210
ARTIC. II. De extensione impenetrabili.	215
CONCLUSIO. Extensio quælibet in infinitum geometricè divisibilis demonstratur.	219
ARTIC. III. De figurabilitate.	229
CONCLUSIO. De perfecta minimarum particularum duritie, diversaque illarum natura nihil affirmandum videtur.	236
ARTIC. IV. De corporis natura.	244
APPENDIX. De quibusdam capitibus præcedentis utilitatibus.	251
