BOOKS PUBLISHED BY J. S. REDFIELD.

MEDICAL BOOKS.

RUDOLPH WAGNER, M.D.,

PROFESSOR OF COMPARATIVE ANATOMY AND PHYSIOLOGY IN THE UNIVERSITY OF
GOTTINGEN, ETC., ETC.

ELEMENTS OF THE COMPARATIVE ANATOMY OF THE VERTEBRATE ANIMALS.

EDITED BY ALBERT TULK.

In one vol. 8vo. Price \$1 50.

"PROFESSOR WAGNER of Gottingen ranks among the first Comparative Anatomists of the age: I entertain the highest opinion of his work, and am happy to learn, it is about to be issued from the American press.

"The subject is one of utility, and has always claimed the attention of the Physiologist. It is beginning to awaken a lively interest among the scientific men of our own country.

"W. PARKER, M.D., &c.

"754 Broadway, Oct. 12, 1844."

**** "I have looked over Wagner's Comparative Anatomy, and it strikes me as admirably fulfilling what the title indicates—that of affording a brief but distinct and comprehensive outline of the subject. I think too, that by this publication, you are conferring a benefit upon medical men, and especially upon students who wish to obtain a general knowledge of the subject, without being obliged to purchase the English works, such as Grant, Jones, Owen, &c., which are all of them expensive books. ****

"R. WATTS, Jr.

"College of Physicians and Surgeons, N. Y."

J. P. MAYGRIER, M.D.

PROFESSOR OF OBSTETRICS AND DISEASES OF WOMEN AND CHILDREN AT PARIS, &c.

MIDWIFERY ILLUSTRATED,

WITH TWO HUNDRED ILLUSTRATIONS.

Translated from the French,

BY A. SIDNEY DOANE, A.M., M.D.

In one vol. 8vo. Price Five Dollars.

"The splendid Illustrations of Midwifery given in Maygrier's large work are admirable in their execution, and essentially useful both to the Practitioner and Student of Obstetrics. Dr. Doane, in making a translation of this work, and giving to the American public an edition of these fine engravings, will essentially serve the cause of medicine: and I do not hesitate to recommend the work.

"EDWARD DELAFIELD, M.D.,

Professor of Obstetrics and Diseases of Women and
Children, University of State of New York."

"I AM of opinion that the translation of M. Maygrier's Midwifery, as prepared by Dr. Doane, will be a most valuable acquisition to Students and Practitioners of Medicine.

"ALEXANDER F. STEVENS, M.D."

WILLIAM BUCHAN, M.D.

A TREATISE ON THE PREVENTION AND CURE OF DISEASES, BY REGIMEN AND SIMPLE MEDICINES.

REVISED AND ENLARGED WITH THE ADDITION OF.

A VEGETABLE MATERIA MEDICA,

Pointing out the virtues, preparations, and doses, of our most valuable native medicinal plants, and an outline of

ANATOMY AND PHYSIOLOGY.

BY J. G. NORWOOD, M.D.

In one volume, 8vo. Price Four Dollars.

"As health is the most precious of all things, and is the foundation of all happiness, the science of protecting life is the noblest of all, and most worthy the attention of all mankind."—Hoffman.

BOOKS PUBLISHED BY J. S. REDFIELD.

J. G. A. LUGOL,
PHYSICIAN TO THE HOSPITAL ST. LOUIS, &C., &C.
**RESEARCHES AND OBSERVATIONS ON
SCROFULOUS DISEASES;**

Translated from the French,
BY A. SIDNEY DOANE, A.M., M.D.
One vol. 12mo. Price One Dollar.

"This is a work of great value to the members of the medical profession, and to the great number of sufferers by an insidious and most widely-extended disease."—*N. Y. Tribune*.

"It is the most complete work we know of on Scrofulous diseases."—*Morning News*.

"M. Lugol has presented us an admirable treatise on Scrofulous Diseases, adapted to the comprehension of all reflecting persons. Not only will enlightened parents derive from it much useful instruction, but the medical profession will assent to the statement that Lugol's Researches contain a very luminous exhibition of the subject to which it relates."—*Christian Intelligencer*.

"It is a very satisfactory and necessary book for all who would understand how to avoid the various ills of Scrofula."—*Evening Mirror*.

"Dr. Lugol has shed great light upon a subject of peculiar interest, both to parents and their children."—*N. Y. Evening Post*.

"Dr. Doane has wisely selected this volume for transfer into our language. The insidious character of Scrofula, the multiplied phases that it assumes, its diversified causes and exhibitions, according to the state of the subject whom it affects, and its wide-spread evils, render a luminous and skilful development of this malady a public benefit."—*Am. Republican*.

P. H. RICORD, M.D.,
SURGEON OF THE VENEREAL HOSPITAL OF PARIS, CLINICAL PROFESSOR OF SPECIAL
PATHOLOGY, &C.

**PRACTICAL TREATISE
ON VENEREAL DISEASES;**
OR CRITICAL AND EXPERIMENTAL RESEARCHES ON INOCULATION
APPLIED TO THE STUDY OF THESE AFFECTIONS, WITH A
THERAPEUTICAL SUMMARY AND SPECIAL FORMULARY.

Translated from the French,
BY A. SIDNEY DOANE, A.M., M.D.
In one volume, 8vo. Price \$1 50.

"The subscriber is personally acquainted with Dr. Ricord, and has seen much of his practice, not only in his Hospital, but in private, and can bear testimony to his merits as a Practitioner, and also to the value of his 'Practical Treatise on Venereal Diseases,' now about to be translated for the general use of the Profession in this country. The present translation is offered to subscribers at less cost than the French edition at Paris.

"VALENTINE MOTT, M.D., *Professor of Surgery.*"

"THE work of Ricord is one of the very best which have been published on Venereal Diseases, and I think that a good English translation will prove of great service to the Profession."

"J. KEARNEY RODGERS, M.D."

"I HAVE seen Dr. Ricord in his Hospital, and have been very much interested in watching his experiments and his practice. I regard the result of his labors of more importance than anything which has appeared since the days of Hunter, and it gives me great pleasure to know that so valuable a work as his 'Practical Treatise on Venereal Diseases' is to be presented to the Profession in the English language.

"WILLARD PARKER, M.D.,

"*Professor of Surgery and Surgical Anatomy.*"

"M. RICORD's 'Practical Treatise on Venereal Diseases' is a substantial addition to our stock of sound professional knowledge. The reprint of his book in this country will do vast good, and none need doubt that the task will be ably performed by his American editor.

"JOHN W. FRANCIS, M.D.,

"*Late Professor of Obstetrics in the
College of Physicians and Surgeons.*"

"M. RICORD's Treatise on Venereal Diseases is generally acknowledged, to be one of the most valuable on the subject which has ever appeared. I doubt not that every subscriber will be fully repaid for the small expense he will incur, by the large amount of original and useful information which he will receive.

"ALFRED C. POST, M.D.,
"Professor of Surgery."

ADVERTISEMENT.

THE want of some good elementary work in our own language, at least of one that, within a small compass and reasonable price, should express the amount of our knowledge upon the Anatomy of the several classes of Vertebrate Animals, was the chief inducement to my undertaking the translation of the present work, in the selection of which I was encouraged by the very favorable light in which Dr. RUDOLPH WAGNER had been already made known to the Medical Profession through his "Elements of Physiology," so ably edited by Dr. WILLIS. The thorough practical knowledge which he possesses of his subject, combined with the clearness and brevity of his style, render indeed his works the very best introductions that are extant to the sciences of Physiology and Comparative Anatomy.

"The *Lehrbuch der Zootomie*," of Dr. WAGNER, having lately arrived at a second edition in Germany, has given the Author an opportunity of thoroughly remodelling the work, and introducing those improvements which time, experience, and more extended knowledge, have suggested to him. It is from this amended edition that I have worked, and finding the original so complete, I have neither added nor taken anything away from it, but have been content with doing my best

to clothe it in an English dress, an attempt in which I trust my labors may not be wholly without success.

The insertion at the end of each Class, of a List of the principal works that treat of its anatomy, instead of in the form of foot-notes, may be regarded as a somewhat novel feature in a scientific work in this country; it is highly important, however, that we should become acquainted with the literature of a subject in order duly to appreciate its value and progress up to the present time; and I have therefore hoped, by giving it a prominent position in the book, to call the attention of the reader more directly to this most useful department of his studies.

ALFRED TULK.

London, 1845.
