# SURGICAL THERAPEUTICS.

SURGICAL DISEASES

AND THEIR

# HOMŒOPATHIC THERAPEUTICS.

By J. G. GILCHRIST, M. D.,

Formerly Lecturer on Surgery, Homœopathic Department, Michigan University. *Third Edition. Entirely Rewritten and Enlarged.*

"It is with more than ordinary pleasure that we receive the work among our book: of surgery, as it is the first instance where a Homœopathic surgeon has furnished the profession with a Surgical Therapeutics, that is to be at once read by every practitioner of our school, and made a text-book in every college."

"The chapters on 'Diseases of the Nerves' and 'Venereal Diseases' are worthy of more than a passing notice. They contain many original ideas, and furnish in my opinion, the most complete selection of remedies that I have ever seen."

S. R. BECKWITH, M. D.,  
*Prof. Cleveland Hom. College and Hospital.*

"Each chapter gives evidence of close clinical observations, and very good therapeutics. One fact is quite prominent, that is, its freedom from hobbies. It contains a great many capital ideas and useful therapeutic hints, each of which is worth, at the very least, one dollar, thus making it of more value, especially to the busy practitioner, than the small price at which it can be purchased."

S. B. PARSONS, M. D.,  
*Prof. Surgery St. Louis College Physicians and Surgeons.*

"The new edition of Gilchrist's Surgical Therapeutics is a very readable book, and one that contains much of value to the practitioner who attempts the surgeon's specialty. . . . We can commend the book to both practitioner and student."

G. A. HALL, M. D.,  
*Prof. Surgery Hahneman Med. College and Hospital, Chicago.*

"This book has become so well known to our profession in its earlier editions, that it is only necessary here to say that the present edition is a very great improvement on its predecessors. It has been so thoroughly revised and rewritten, albeit keeping the same old object in view, that those who appreciated the first edition will want to supplant it with this.—*N. E. Med. Gazette.*

"This is the third edition of the first work on Surgical Therapeutics in our school, entirely rewritten and brought down to date, enriched by the clinical and therapeutical researches of a hard student. . . . The chapters on 'Tumors,' 'Diseases of the Nerves,' and especially that on the 'Genito-Urinary Diseases,' are exhaustive in their remedial indications, and invaluable to the practitioner removed from easy access to surgical consultation."—*Med. Advance.*

# HOW TO SEE WITH THE MICROSCOPE:

BEING

USEFUL HINTS CONNECTED WITH THE SELECTION AND USE OF THE INSTRUMENT; ALSO SOME DISCUSSION OF THE CLAIMS AND CAPACITY OF THE MODERN HIGH ANGLED OBJECTIVES, AS COMPARED WITH THOSE OF MEDIUM APERTURE; WITH INSTRUCTIONS AS TO THE SELECTION AND USE OF AMERICAN OBJECT-GLASSES OF WIDE APERTURES.

BY

J. EDWARDS SMITH, M. D.,

PROFESSOR OF HISTOLOGY AND MICROSCOPY IN THE CLEVELAND (O.), HOMŒOPATHIC HOSPITAL COLLEGE; CORRESPONDING MEMBER OF THE SAN FRANCISCO, THE DUNKIRK, AND ILLINOIS STATE MICROSCOPICAL SOCIETIES, ETC., ETC.

ILLUSTRATED.

[From Prof. Tuttle of the Ohio State University.]

I have had the pleasure of examining a portion of the MS. of Prof. Smith's forthcoming book, and believe that it will prove a valuable addition to the literature of microscopy. We have many books that tell us what the microscope is and many that tell us about the preparation of microscopic objects. But few tell us anything of value about the use of the instrument itself. This is what Dr. Smith's book undertakes to do, in a clear and logical, but familiar and practical way.

One of the most important features of the book is a systematic course of lessons on the use of modern high-angled objectives; a thing which has, I believe, never been attempted in any book before. Prof. Smith was one of the earliest and most persistent advocates of the use of such objectives, and his experience with them is excelled by that of few.

The book abounds in practical hints that will be most highly appreciated by those of us who have had to work out for ourselves a great amount of experience at a great expense of precious time (and often more precious eye-sight), and who know how serviceable a stray hint, or a word or two of suggestion has often proved.

Ohio State University, February, 1880.

Prof. Smith is well known as the most expert manipulator in this country, as regards objectives of wide aperture, and in this volume he gives, in a clear and practical manner all the directions necessary to attain the surprising results which he has achieved. No microscopist who uses anything better than French triplets can afford to be without it.—*From John Phin, Esq., Editor Monthly Journal of Microscopy.*

There is at present no work in the English language which gives instruction in the best methods of handling the most modern microscopes and objectives. Prof. Smith's work will, therefore, fill a long felt hiatus in our microscopical literature. We shall duly announce it when ready.—*Monthly Journal of Microscopy.*

[From Prof. Charles E. West, the well known Educator.]

Of your prolonged study and experience with modern objectives—your well known dexterity in their management—the ease and facility with which you display the most difficult known test, I can cheerfully bear testimony. Doubtless your book will be welcomed by American Microscopists generally.

Very sincerely yours, CHARLES E. WEST.

[From Prof. Wesselhoeft of Boston University.]

BOSTON, February 6, 1880.

DUNCAN BROTHERS:—I know of no one who has the ability to instruct more clearly and practically "How to See with the Microscope," than Dr. J. Edwards Smith. I wait eagerly the publication of his book.

Yours truly, C. WESSELHOEFT, M. D.

Sent free by Mail. Price, bound in Cloth, \$2-00.

Second Edition!

AN

## ILLUSTRATED REPERTORY.

### CHEST PAINS:

THEIR DIRECTION, CHARACTER, ETC.

By R. R. GREGG, M. D.,

Gregg's Illustrated Repertory is an old and valued friend, and in many a disputable case the arrow's point divided our choice of the remedy.—*North Am. Jour. of Homœopathy.*

The idea of helping our sadly overlaid memories with the aid of a pictorial symptomatology is very laudable. \* \* \* This book teaches us one very useful lesson, which our careful author has evidently learnt well, viz., the very great importance of noting the directions of pains.—*Hom. World.*

Whatever tends to exactness in the practice of medicine should meet a ready welcome from every practitioner. Moreover, every one who knows much forgets a great deal, or, at least, it is not just on hand when he wants it and it may take more time than he has at his command to look it up. This work of Dr. Gregg meets both these indications in an admirable manner as far as 118 remedies are concerned, giving in five charts, the directions and characters of the pains produced thereby. No attempt has been made to show how the author offers all this knowledge in a desirable shape. No description would do justice, and, as the work is within the reach of all, it is not necessary to quote from some modern writer, whose name has escaped me: "No physician's library should be without it."

G. E. SHIPMAN, M. D.

We think the idea a very happy one and likely to prove of much usefulness. Patients often complain of anomalous pains, and are glad to get relief from them, though neither the sensations they have nor the remedies we employ are related to deeper complaints for which we may be treating them. We can best help them by administering a drug which has caused similar pains on the healthy subject; and such a drug can be much more rapidly found by looking at one of Dr. Gregg's plates than by turning over the pages of an index to the *Materia Medica*. It may sometimes happen, moreover, that these pains have a true pathological relation to the patient's whole morbid state; in which case the remedy homœopathically indicated by them may do good generally, and may even prove to be the true *simile* of the malady. Dr. Gregg gives some instances in which this seems to have obtained.—*Brit. Journ. of Hom.*

The illustrations consist of page plates, representing the locality, direction and extent of pains affecting all portions of the trunk; this is accomplished by means of arrows figured upon the outlined human form. These indicate the seat, course, etc., of a multitude of pains, and to each one of these arrows is attached the name of the curative remedy. The repertory proper is divided into chapters, each of which is devoted to a certain portion of the body, as the chest, right side, left side, back, etc. There is no rehashing of well known and time worn characteristics, but the subject matter is to the point and that without unnecessary verbiage, being so plain that no one can fail to comprehend them. Chapter V. is devoted to "confirmations" and consists of clinical cases cured by physicians who were led to base their prescriptions upon the information afforded by this Repertory. This department is no less interesting and instructive than the rest of the book and serves still further to illustrate the method of using this work. Taken altogether, the book contains a mine of wealth, richly repaying the student for the time he bestows upon it. The typographical portion is excellent and the book neatly bound.

A HAND-BOOK

OF

## DISEASES OF THE SKIN.

BY J. R. KIPPAX, M.D., LL.B.

Professor of Institutes and Practice of Medicine and Medical Jurisprudence in the Chicago Homœopathic College; Physician to the Department for Skin Diseases at the Central Homœopathic Free Dispensary of Chicago.

Nicely Bound in Cloth, \$1.50.

I have received your Hand-book of Skin Diseases, and consider it a valuable clinical production, a "*multum in parvo*." Yours always,

JAMES THORBURN, M. D.,  
*Prof. of Materia Medica and Therapeutics in Toronto School of Medicine, Ont.*

Prof. Kippax has presented us a clear, concise, and scientific treatise on Diseases of the Skin. Such a work adds to the reputation of Homœopathy. All phases of the subject are well considered. The treatment—local, internal, and hygienic is specially rich for a volume of its size. Indications for remedies are characteristics. These often intractable diseases will be rendered more easy of cure by means of this admirable brochure.

J. S. MITCHELL, M. D.,  
*Prof. of Theory and Practice and Clinical Medicine, Chicago Homœopathic College.*

I am very much pleased with your Hand-book of Skin Diseases. It is truly "*multum in parvo*." Your section on eczema is worth the price of the book many times over. Your treatment is concise and to the point. I am glad you avoid the usual abomination,—enumerating the whole *materia medica*, and then running away, leaving a poor fellow in the wilderness, to get out the best way he can. I wish to congratulate you on your success.

GEO. LOGAN, M. D.,  
*Vice-President of the College of Physicians and Surgeons, Ont.*

Having thoroughly examined your "Hand-book of Skin Diseases," it gives me pleasure to accord it my hearty approbation. Its chief value is its conciseness, while in every detail it fulfills perfectly its office as a valuable treatise for study and reference by both students and practitioners, being a neat, systematic, reliable, compact, and comprehensive work upon diseases of the skin. I shall take satisfaction in recommending your book to the classes attending my lectures upon the skin, as well as to the profession generally.

PHIL. E. ARCULARIUS, M. D.,  
*Lecturer on Skin Diseases in the New York Homœopathic College.*

In these days of massive books it is refreshing to read a brochure which condenses the pith of a large work into a small compass. Such is Dr. Kippax's "Hand-book of Skin Diseases." To these advantages to the busy practitioner and the student are added in this little book excellent type and paper, and plenty of interspace to prevent the wearying of the eyes. The classification of skin diseases is concise and very useful. This is a difficult task well performed. Part II. contains the description and treatment of skin affections arranged in alphabetical order. The definitions are printed in small caps, which brings them prominently before the eye, and helps in their comprehension. Part III. comprises a chart of characteristics, with diagnostic, therapeutic, dietetic, and hygienic hints. The remaining three parts include a glossary, metric tables, and bibliography of works consulted by the author. In regard to the treatment, the work is quite complete for a hand-book. Under anthrax are collected indications for fourteen remedies; under eczema, for fifty-two, etc.—*Hahnemannian Monthly.*

A TREATISE  
ON  
TYPHOID FEVER,  
AND ITS  
HOMŒOPATHIC TREATMENT.

BY  
C. F. PANELLI, M. D., NAPLES, ITALY.

(Translated with Copious Notes, by Geo. E. Shipman, M. D.)

To judge somewhat of the value of this work, it should be known that Dr. Panelli was formerly assistant in the Clinic in the Hospital of Santa Maria di Loreto e della Pace, where all afflicted with fevers were received, and in great numbers. From extensive notes made at that time, and during a subsequent ten years' practice as a Homœopathic physician, being "obliged to pursue lengthy investigations to find in the *Materia Medica* the proper remedy for each case (of Typhoid Fever), differing as they do, according to the variety of symptoms, and lest I should have to repeat these studies I preserved and arranged all these minutes." With this material he has given the profession this valuable work on Typhoid Fever. Additions have been made from American sources, rendering it more complete and up to date.

I am very much pleased with Panelli's Typhoid Fever. Would not do without it, and recommend every one who treats Typhoid Fever to get a copy.  
C. C. ÖLMSTED, M. D.

I have had the pleasure of consulting some of the advance sheets of the forthcoming work on typhoid fever, and I cannot too earnestly commend it. Fascinating as a novel, I really enjoyed it, while it furnished invaluable information. A valuable addition to our literature, and fills a niche that nothing else does.  
E. A. BALLARD, M. D.

This book fills a vacant place in the catalogue of Homœopathic literature. A glance through its pages will readily evince the fact that it is replete with sound practical sense and useful information; that it is prepared with great care and thoroughness, every phase of the disease brought under consideration and ably discussed; the adaptability of homœopathic remedies clearly and faithfully portrayed, and altogether just such a book as is required in every-day life.

S. B. PARSONS, M. D.,  
Sure Homœopathic Medical College, Mo.

Dr. Shipman deserves great credit for his translation of Panelli's Typhoid Fever. The publishers are to be congratulated on the admirable appearance of the volume. It is a good work all round. We are so accustomed to turn to Old School authorities for anything classical, that it is a positive pleasure to take up your late addition to our literature, which gives the best indications for Homœopathic treatment, and proves to be also a thorough scientific treatise.

J. S. MITCHELL, M. D.,  
President Chicago Homœopathic College, Prof. Practice of Medicine.

The author has given us a record of his observations of the variations and changes which take place in all the organs, secretions and excretions, during a siege of this formidable disease. In the treatment which he lays down, we find much that commends itself to all who sincerely believe in Homœopathy. It is strictly homœopathic, and yet the author writes with a liberal and catholic spirit. His reasoning is based on facts. He shows that Homœopathy is a perfect system, and that any and every departure from it in practice is detrimental to the sick, and treason against science. No one can read this work, carefully and candidly, without deriving a vast amount of instruction.

A PRACTICAL GUIDE  
FOR MAKING  
POST-MORTEM EXAMINATIONS,  
AND FOR THE STUDY OF  
PATHOLOGICAL ANATOMY.  
WITH  
DIRECTIONS FOR EMBALMING THE DEAD, AND  
FOR THE PRESERVATION OF SPECI-  
MENS OF MORBID ANATOMY.

BY  
A. R. THOMAS, M. D..

Professor of Anatomy in Hahnemann Medical College of Philadelphia; Lecturer on Artistic Anatomy in the Pennsylvania Academy of Fine Arts, and Philadelphia School of Design; Member of the American Institute of Homœopathy; General Editor of the American Journal of Homœopathic Materia Medica, etc., etc.

The directions for opening each grand division of the body are clear and thorough, and could have been written only by *one who had been there himself*. Chapters IV and V are alone worth the price of the book.—*American Homœopathic Observer*.

We are glad to know that Prof. Thomas has consented to place in the hands of the profession so valuable an aid in post mortem examinations. Not only do we learn how to perform the operation skillfully but the morbid anatomy of the part is plainly set forth. This work should be placed in the hands of our students, and made a part of the curriculum of our schools. It is well systemized, compact, and beautifully printed.—*Medical Advance*.

It is not a mere guide as to how to cut open, how to dissect, and how to sew up a dead body, nor even a bald catalogue of morbid appearance of various organs, but a highly readable, and we may say, a fascinating story of the ravages of disease within the "human form divine," indeed to be a perfect and exhaustive treatise on morbid anatomy; which disclaimer, however, will prove an encouragement to the busy physician who has time to peruse only that of which he dare not be ignorant. \* \* \* We say to every Homœopath, (and Allopath as well), buy and study Dr. Thomas' work. You will thank us for the advice.—*American Journal of Homœopathic Materia Medica*.

This work is a valuable text-book and ready reference for the busy practitioner on pathological questions in the living as well as in the dead.

Price, \$2.00. Sent free on receipt of price.

DISEASES  
— OF THE —  
*Brain and Nervous System.*

By J. MARTINE KERSHAW, M.D.,

*Professor of Brain, Spinal and Nervous Diseases in the Homœopathic  
Medical College of Missouri.*

Now Ready:

PART I.—Facial Neuralgia; Cervico-occipital Neuralgia; Cervico-brachial Neuralgia; Dorso-intercostal Neuralgia; Dorso-lumbar Neuralgia; Cerebral Neuralgia; Angina Pectoris; Gastralia Mastodynia; Neuralgia of the Ovary, Uterus, Testicle, Urethra, Bladder, Kidney and Diaphragm. *Now ready.*

PART II.—Spinal Irritation; Chorea; Glosso-labio-laryngeal Paralysis; Facial Paralysis; Writer's Spasm. *Just out.*

In Preparation:

PART III.—Locomotor Ataxia; Hemiplegia; Aphasia; Sclerosis of the Antero-lateral Columns of the cord; Athetosis.

PART IV.—Epilepsy; Hysteria; Hysterico-epilepsy; Catalepsy; Ecstasy; Sonambulism.

PART V.—Spinal Meningitis; Spinal Congestion; Myelitis; Organic Infantile Paralysis.

PART VI.—Headache; Syphilis of the Brain and Spinal Cord; Tumors of the Spinal Cord; Insanity.

PART VII.—Growths and Tumors of the Brain; Cerebral Softening; Progressive Muscular Atrophy; Paralysis Agitans; Tetanus; Hydrophobia.

PART VIII.—Cerebral Anæmia; Partial Cerebral Anæmia from Obliteration of Cerebral Arteries; Cerebral Congestion; Cerebral Hæmorrhage; Diffused Cerebral Sclerosis; Multiple Cerebral Sclerosis; Cerebral Meningitis; Vertigo.

Issued in Eight Parts, a part contains about 60 pages, and to treat of from three to six diseases, Illustrated throughout. Each part complete in itself.

Sent free by Mail. Price, per Part, 50c.

*“Doctor, What shall I eat?”*

A  
HAND BOOK  
OF  
**DIET IN DISEASE.**

By C. GATCHELL, M. D.

This work is a very practical and timely volume not only for those who are sick, but also for those who are not really well, and to whom the problem, “What shall I eat,” is of vital importance. It would not be possible to give a full idea of the scope of the work here. As introductory, the various forms of animal, vegetable and inorganic foods are considered and their relative merits carefully pointed out. The chapters that follow are devoted to such practical subjects as How to feed Your Patients, Diet for Dyspepsia with aids to Digestion, Diet for Constipation, Rectal Alimentation, etc.; Diet in Consumption, Diet in Diabetes, Bright's Disease, Gravel, etc.; How to nurse the Baby, Diet for Cholera Infantum, Diet for Travelers, Seasickness, the Corpulent Scrofula, Rickett's, Scurvy, Chlorosis, Collapse, Rheumatism, Asthma, Heart Disease, Alcoholism, Diarrhoea, Dysentery, Cholera, Diphtheria, Gastritis, Biliousness, etc. Diet for convalescents is a valuable chapter. Then follows a long and carefully prepared list of recipes for the preparation of Beverages, Meats, Broths, Soups, Breads, Gruels, etc., etc.

The whole work is carefully arranged and the most practical and sensible advice is apparent on every page. An invalid or sick person needs not only a number of diet recipes to select from, but also some one to do the selecting—they are in no more condition to select a proper food than they are to select a proper remedy. The nurse will find this work a safe guide; while the physician will meet suggestions that will facilitate an answer to the all important question in each case: “What diet shall I prescribe?”

TESTIMONIALS OF ITS MERITS.

MILWAUKEE, Wis.  
“I consider your work on “Diet in Disease” to be the most practical, and therefore the most useful, work on the subject with which I am acquainted. No physician should be without it; every mother should have it. It is in use in many of the households in which I practice.”

C. C. OLMSTED, M. D.,  
President of the Wisconsin State Homœopathic Medical Society.

“This work is plain, practical and valuable. It is really a clinical guide on diet, and one the profession will find reliable and correct.”—United States Medical Investigator.

“By far the best work on the subject in our literature. I find it of use every day. I want one in every household in which I practice.”

Oak Park, Ill. E. G. FOLSOM, M. D.,

“Evidently much investigation, thought and carefulness have entered into the production of this work, and we believe it to be worthy a place in every household.”—The Magnet.

“We have carefully examined the work and shall cheerfully recommend it for family use. The directions as to what food and drinks, and modes of preparation are very judicious.” \* \* \* \* \*

Janesville, Wis. Resp. Yours,  
Dr. G. W. CHITTENDEN & SON.

MILWAUKEE, Wis., Sept. 8, 1880.  
Professor Charles Gatchell's Manual of ‘DIET IN DISEASE’ is the best book on the subject for the people. It contains in 160 pages an astonishing amount of condensed information on a subject of great importance, and one but little understood. Its style is admirable, pithy and to the point. The book has no padding about it, and deserves an immense sale.

SAM'L POTTER, M. D.,  
President, Milwaukee Academy of Medicine,  
Author of Index of Comparative Therapeutics, etc., etc.

DISEASES  
OF  
INFANTS AND CHILDREN.  
AND THEIR  
HOMŒOPATHIC TREATMENT.

By T. C. DUNCAN, M. D.,

PRESIDENT OF THE AMERICAN PÆDOLOGICAL SOCIETY, PRESIDENT OF THE  
ILLINOIS HOMŒOPATHIC MEDICAL ASSOCIATION, ETC., ETC

It is wonderfully comprehensive and cannot fail to be useful.

Think highly of it. It will supply a want in Homœopathic literature.

Volume II. received. It is truly a *Magnificent* work. I am delighted with it.

It is just what I have always felt the want of and am glad you have sent it forth on its blessed mission.

I like this work. It goes to the bottom of every subject. This is a strong point in its favor with me.

These (diseases) are all treated in a masterly manner.—*American Observer*.

Volume II. of "Infants and Children" received. I am well pleased with the book. Just what every practitioner should have.

The medical profession owe you an everlasting debt of gratitude for the two volumes of your invaluable work on the Diseases of Infants and Children.

I am much pleased with your book on children. It shows extensive investigation and careful observation.

The author has made such a concise compilation that his work may be adopted as a handbook of our school, and we trust no homœopathic physician will allow himself to be without it.—*Hom. Times*.

Each subject is treated exhaustively and compiled from the very best and latest literature on the subjects. Much time and labor have been expended in gathering and arranging the material for publication. The therapeutic indications are fully and admirably given, having been taken from all homœopathic sources, native and foreign.—*Hahnemannian Monthly*.

The work is begun at the very foundation, and Ante-Natal Development receive first attention. Diseases of the fœtus follow, and then come the diseases of early life. Fifty pages are devoted to the consideration of "Food for Infants and Children," without which the book would be incomplete. The subject has received much attention and the literature very fully gone over. From this chapter the practitioner can obtain much information which will aid him in attending to the very important part of the treatment of the diseases of infancy.

Duncan's Text Book fills a long neglected want. It is the only homœopathic book on diseases of children written on a scientific basis. We feel glad that Duncan gives such prominence to physiological therapeutics, a branch too much neglected in many otherwise fair text-books. How and when to feed a child is at least of equal importance as to heal it when from sheer ignorance it is made sick. As old a physician as I am, I thank Dr. Duncan for this instruction, and I promise him to investigate his other volume with equal zeal. May others do the same.—*North American Journal of Homœopathy*.

At last Dr. Duncan's labors, so long continued, are ended, and the profession possess that much needed and desired contribution to our literature, a modern and complete work on the diseases incident to Infancy and Childhood. Dr. Duncan has performed his work well. In the diagnosis and pathology, much is original, though the best allopathic authorities are freely quoted. Nothing more could be asked in the way of treatment, which is plain and practical, while, best of all, considerable attention is paid to those hygienic measures so necessary in the care of sick children, and which Dr. Duncan so well understands. We congratulate both the author and the profession on the completion of so valuable a book.

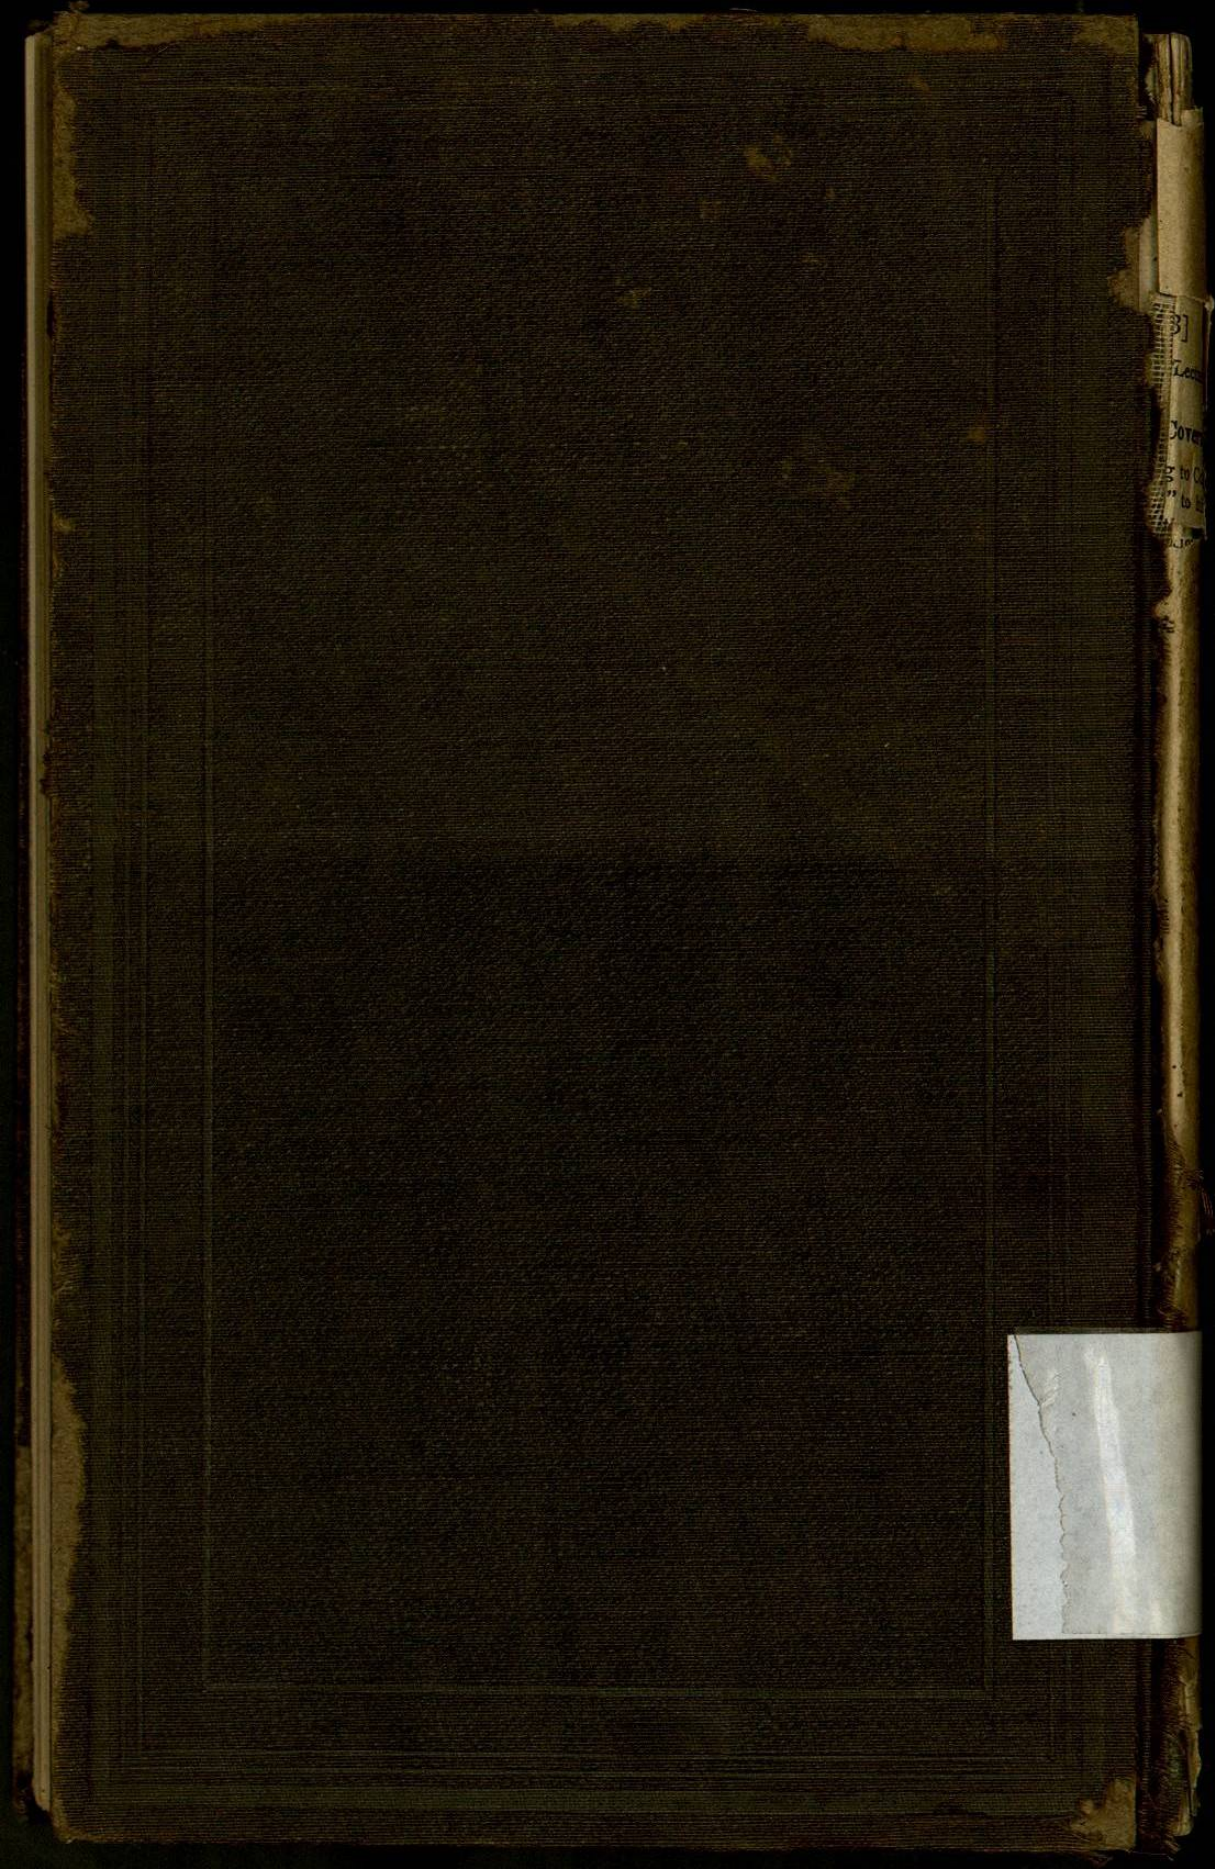

Prof. of Materia Medica and Diseases of Women and Children, State University of Iowa, Homœopathic Medical Department.
